

Did you know...

- The organics bin colour is lime green
- The compost made from the contents of the organics bin is used for farms and vineyards to grow our food and make wine. The compost is also used on parks and gardens across Australia, and is donated to many schools.
- If you put items that are not compostable and should not go in the organics bin, it may contaminate the entire load and may result in that product going to landfill.

Thank you for using your Food Organics bin correctly. You are part of the solution in diverting waste from landfill and recovering valuable resources which can be turned into new products for us to enjoy again. Veolia thanks you for your commitment to sustainability and protecting our environment. If you need any further assistance, please contact us

Understanding your Food Organics / Garden Organics Bin

What can go in your FOGO Bin

Fruit and vegetable scraps

Garden Waste
(grass clippings, leaves,
small branches)

Meat & bones

Dairy products

Leftover cooked
food

Certified
Compostable bin
liners

Coffee grounds and
tea bags

Seafood & shells

Bamboo or wood
cutlery/chopsticks

Paper towels

Flowers

What cannot go in your FOGO Bin

Packaged food
(remove from packaging)

Plastic items (including
bags, cling wrap, ties)

Non-compostable
coffee cups & lids

Coffee pods

Metal, glass and
plastic recyclables

Large bones

Rubber bands

Plastic bin liners

Cling film

The contents of your organics bin will get turned into compost, which is then used on farms and vineyards to make our food and wine.

Rule of thumb: If you cannot eat it, it should not go into the organics bin. Any of the above items contaminates your organics bin and may result in the entire load being sent to landfill.
