WHYALLA NORTHERN COASTLINE MASTER PLAN
FINAL REPORT
JANUARY 2017
# CONTENTS

## Part A: Background Investigations

### Executive Summary

1. **Introduction**
   - 1.1 Context
   - 1.2 Purpose
   - 1.3 Study Area

2. **The Study Area**
   - 2.1 Locality
   - 2.2 Key Land Uses & Tenure
   - 2.3 The Natural Environment
   - 2.4 Recreation & Tourism Activities
   - 2.5 Access
   - 2.6 Zoning
   - 2.7 Indigenous Land & Heritage

3. **Strategic Context**
   - 3.1 South Australian Planning Strategy - Eyre and Western Region, 2012
   - 3.2 SA Tourism Plan 2020
   - 3.3 SA Nature Based Tourism Action Plan
   - 3.5 Spencer Eyre Peninsula NRM Sub-Regional Plan - draft
   - 3.6 Regional Climate Change Adaptation Plan for the Eyre Peninsula
   - 3.7 Eyre Peninsula Coastal Action Plan and Conservation Priority Study
   - 3.8 Eyre Peninsula Coastal Access and Off-Road Vehicle Strategy
   - 3.9 Upper Spencer Gulf Marine Park Management Plan Summary
   - 3.10 Eyre Peninsula Destination Action Plan (DAP) 2012-2015
   - 3.11 Whyalla City Council Strategic Plan 2015-16 to 2019-20
   - 3.12 City of Whyalla Tourism Strategic Plan 2015-18

4. **Socio-Economic Context**
   - 4.1 Demographic Context
   - 4.2 Manufacturing & Mining Industries
   - 4.3 Fishing & Aquaculture Industry
   - 4.4 Tourism Sector

5. **Tourism Market Analysis**
   - 5.1 Broad Market Trends
   - 5.2 Visitation on the Eyre Peninsula
   - 5.3 Visitation in Whyalla

6. **Consultation**

7. **Audit of Existing Facilities**
   - 7.1 Key Infrastructure

8. **Swot Analysis**
   - 8.1 Strengths
   - 8.2 Weaknesses
   - 8.3 Opportunities
   - 8.4 Threats

## Part B: Master Plan

9. **Master Plan**
   - 9.1 Structure & Purpose
   - 9.2 Master Plan Opportunities
   - 9.3 Vision
   - 9.4 Objectives
   - 9.5 Precincts
   - 9.6 Overall Master Plan

10. **Conclusions & Implementation**

### APPENDIX

- APPENDIX 1: CONSULTATION SUMMARY
- APPENDIX 2: AUDIT
- APPENDIX 2: MASTER PLAN
- APPENDIX 3: IMPLEMENTATION PLAN
PART A: BACKGROUND INVESTIGATIONS
EXECUTIVE SUMMARY

This Master Plan has been prepared on behalf of the Whyalla City Council and RDA Whyalla Eyre Peninsula. The purpose of the Master Plan is to provide the direction and framework for a tourism based economic and sustainable development strategy for the Northern Coastline of Whyalla. It seeks to identify and prioritise future projects and actions to be undertaken in the area by a range of stakeholders.

The Master Plan has regard to the following considerations:

• Existing physical assets;
• Existing environmental assets;
• Existing visitor profile, needs and demands; and
• Potential target markets, noting different economic value associated with different market segments.

Investigations have identified a range of opportunities which can leverage off both the existing natural and physical assets of the Northern Coastline in order to increase the visitation to the area from both existing and new market segments.

These opportunities can be grouped into the following key themes:

• Nature;
• Adventure;
• Aquatic; and
• Camping and other forms of tourist accommodation.

Initial leveraging of existing assets should aim to increase visitation and increase length of stay in the Whyalla region, thereby benefitting the existing tourism providers and the general economy of Whyalla.

This should result in a stronger and more diverse destination profile, which will increase the potential of the region.

For the success of the Master Plan it will be particularly important to:

• Increase and lengthen visitation to the Northern Coastline;
• Ensure the infrastructure and experience satisfy the needs and expectations of visitors;
• Ensure year-round sustainable development and growth;
• Build a complete destination and increase awareness.

The recommended Implementation Plan, identifies initiatives, responsibilities, priorities together with budget implications. Initiatives with the highest level of priority include:

• The improvement of existing diving facilities including the upgrade of the existing diving site at stony Point on Cuttlefish Coast; and
• The progression of an EOI for the private redevelopment of the lighthouse and cottages precinct (potentially including the camping ground), with the potential to include additional recreational/cultural facilities.

The Master Plan will evolve and adapt over time, and is intended to initially respond to a 10 to 15 year horizon.
1. INTRODUCTION

1.1 Context

Whyalla is located 396km north-west of South Australia’s capital, Adelaide. The city is the largest in the Upper Spencer Gulf region, and is located on the western shores of Spencer Gulf. Founded in 1901 as the town of Hummock Hill and renamed Whyalla in 1914, it was established as a port to ship iron ore extracted from the nearby Middleback Ranges.

Whyalla is the major population, industry and service centre of the Upper Spencer Gulf with an Estimated Resident Population of 22,759 persons in 2015. It contains a large number of educational, retail and commercial facilities and services, including a regional campus of the University of South Australia.

Whyalla became a key South Australian centre of steelmaking at the start of the 20th century, with the start of ship construction and the Whyalla Steelworks in the early 1940s. Following the closure of the shipyards in the late 70s, the viability of the steelworks has experienced increasing pressure and uncertainty.

It has become apparent over the last few years that diversification is required to sustain the local economy.

The City of Whyalla has identified the Northern Coastline of Whyalla as being an area with potential for further economic recreational and tourism development. Accordingly, a project brief to prepare a Master Plan was formulated by Council in conjunction with the Regional Development Australia Whyalla and Eyre Peninsula (RDAWEP).

1.2 Purpose

The Master Plan for the Development of Whyalla’s Northern Coastline seeks to undertake research, identify and assess options and incorporate into a plan of action that will maximise Whyalla’s Northern Coastline recreational and tourism potential.

The project output will be a comprehensive Master Plan for the future development of the coastline which will form the base for longer term development of the area. The long term aim is to identify and develop high quality recreational and tourism infrastructure and activities that will increase utilisation of the precinct by residents of Whyalla and visitors to the region.

As identified in the project’s brief, the Master Plan will:

- Investigate current land tenure and planning policy;
- Investigate and quantify expected increased demand, current capacity and costs of infrastructure;
- Include evidence based market research;
- Identify the existing aquaculture zones within Fitzgerald Bay and investigate the potential for these areas to become productive once again;
- Investigate the provision of services and infrastructure for current residents;
- Identify specific precincts which might support more intensive development;
- Ensure that the area’s fragile ecosystems are protected;
- Include cost estimates; and
- Be able to be regularly updated.

1 ABS, Regional Population Growth, Local Government Areas
The project also needs to ensure future tourism and recreational activities are able to co-exist with existing industry. In other words, tourism and recreational development will not be facilitated at the expense of industry. The Master Plan will form part of a long term strategy (10-15 years) where actions can be implemented over time in order to achieve the Master Plan vision.

1.3 Study Area

The Study Area is shown in Figure 1.1 and extends from False Bay to Stony Point, and from Point Lowly to Douglas Point.

The Study Area is located some 20 kilometres from Whyalla, and extends over a stretch of some 35 kilometres along the northern coastline.
2. **THE STUDY AREA**

2.1 **Locality**

The broad locality comprises a mix of land uses, which is generally identified on the Land Use Plan which forms Figure 2.1. The key distribution of land uses can be described as follows:

- Large tracts of essentially undeveloped Conservation Zone land bordering the coastline;
- Industry Zone land (Deferred Industry and Special Industry (Hydro) Zones), which includes:
  - The Santos Processing Plant to the west of Point Lowly in Port Bonython. The land is leased to Santos by the SA Government. A 2.5 kilometre long jetty extends over the water, which is also owned by the SA Government and leased to Santos;
  - Mitsubishi Corporation’s diesel import facility, consisting of three fuel storage tanks, a pipe-rack above the jetty and pipelines;
- Unzoned land owned and used by the Department of Defence, known as the Cultana Jenkins Training Area, as shown by Figure 2.2.

It is noted that a desalination plant and associated pump station, proposed by BHP, was approved in 2011 in Point Lowly, just north of the Santos plant. Construction of the desalination plant is yet to commence. BHP has indicated that the facility may be constructed in the future.
2.2 Key Land Uses & Tenure

The majority of the Study Area is undeveloped and comprises large tracts of leasehold Crown land, as identified by Figure 2.2.

Figure 2.3 identifies in greater detail the landowners in the Study Area. These include:

- Commonwealth Government (Defence);
- State Government (Department of Planning, Transport and Infrastructure (DPTI) and Department of Environment, Water and Natural Resources (DEWNR)), including land under the care and control of the City of Whyalla, noting that the purpose of the Council care land is for coastal conservation;
- City of Whyalla;
- Private owners (residential and industrial owners).

Figure 2.12 in Section 2.7 identifies traditional ownership of the land.

It is important to recognise the following key uses/activities:

- The Point Lowly Lighthouse, which is in operation and also registered as a South Australian Heritage Place since 1994\(^2\);
- Shacks/dwellings in the Point Lowly area and along the coast from Fitzgerald Bay to Point Douglas. It is noted that 15 dwellings have been approved by Council in the past ten years. All dwellings use on-site waste treatment; and
- A range of tourism and recreation facilities, further described in Section 2.5.

\(^2\) Point Lowly Lighthouse Complex (including Lighthouse, Reserve Land of 2.14 Hectares, Power House, Two Keepers’ Cottages, Oil Store, and Signal Flag Mast)
2.3 The Natural Environment

2.3.1 The Land

The Study Area comprises primarily undeveloped natural coastline environment characterised by:

- Uneven terrain, sand dunes and cliff tops. Those dunes located at Fitzgerald Bay and near Point Lowly are the most northerly on the western side of the Spencer Gulf and contain rare fauna specimens:\[3\];
- Low to medium height cliffs along the southern shoreline;
- Sandy beaches exist along the southern coast (False Bay, western edge of the Lowly Peninsula) and at Fitzgerald Bay. They are about 3 to 5 metres above sea level;
- Mangroves;
- Rocky beaches are found to the east and west of the Santos Plant;
- Mallee/saltbush is only found around Black Point and the southern portion of the Study Area. The rest of the Area is mostly composed of low to medium height bushes; and
- The entire coastline is identified as wetlands of national importance which are home to fauna and flora of conservation significance.

As the Study Area comprises coastal land, risks of flooding and erosion exist as shown on Figure 2.4. It is noted that, as in most low-lying coastal regions, the majority of the Study Area is prone to coastal acid sulphate soils, including the whole of the Point Lowly Peninsula. These are formed during and following tidal movements. When disturbed (leading to air exposure), this may lead to additional soil oxidation and cause/worsen erosion, leading to habitat degradation and loss of biodiversity, such as mangrove dieback. Disturbance may be the consequence of infrastructure work, industry work, tourism activities, boating/ marinas, or in some cases aquaculture:\[4\].

\[3\] Eyre Peninsula Coastal Action Plan and Conservation Priority Study

\[4\] South Australian Coast Protection Board, A Strategy for Implementing CPB Policies on Coastal Acid sulphate Soils in South Australia, 2003

Figure 2.4: Coastal Condition
As shown by Figure 2.5, the majority of the Study Area is not subject to native vegetation constraints.

In terms of geological heritage, the stranded shingle beach ridges are a natural geological phenomenon which extends along portion of the coast and is found in the Study Area at Fitzgerald Bay. The general extent of this area is identified on Figure 2.6. This occurrence is the only one in South Australia and is generally uncommon in Australia.

An application to register the ridges on the SA Heritage database was submitted in 2014.

The SA Heritage Council has provisionally entered the ridges on the Register. This will be confirmed after a 3 month public consultation process.
2.3.2 The Marine Environment

A significant feature of the Spencer Gulf marine environment is the sub-tidal reef area adjacent to the coast of Point Lowly. This is the location of the annual spawning of the Giant Australian Cuttlefish.

Being home to this large breeding aggregation of cuttlefish, typically from May to August each year, Whyalla is internationally renowned as the Cuttlefish Capital of the World.

Whilst there have been concerns about the cuttlefish population decreasing\(^5\), a population increase was recorded in 2014 at Point Lowly.

Notwithstanding, it is noted that the cuttlefish and cephalopods in general have low tolerance to variations in salinity, temperature and pH levels in seawater and may therefore be impacted on by the effects of climate change, or change their areas of distribution and breeding.

The unique mass aggregation of cuttlefish in Whyalla is fragile, and relies on the maintenance of a suitable marine environment.

It is noted that Flinders Ports are looking at developing a new deep-sea iron-ore export facility, with Point Bonython one of the options, which would comprise a range of on and off shore infrastructure including a jetty adjacent to the cuttlefish breeding area. An Environmental Impact Assessment (EIS) has been prepared and is being considered by DPTI.

The EIS has considered the presence of the cuttlefish and sought to mitigate any unreasonable impact.

Marine Management\(^6\)

As part of the Upper Spencer Gulf Management Plan, the marine environment is already managed via a range of zones, as shown by Figure 2.6, including a Sanctuary Zone for the cuttlefish with an all year round fishing closure and a special purpose area along the south-western coast of the Study Area for shore-based recreational line fishing.

---

\(^5\) It is noted that, whilst the cuttlefish spawning aggregation is stable, it declined from a peak of approximately 183,000 animals in 1999 to 18,530 in 2012 (Eyre Peninsula Coastal Action Plan)

\(^6\) Upper Spencer Gulf Management Plan
Off shore, adjacent to the eastern portion of the Study Area (i.e. between Point Lowly and Douglas Point) is a General Managed Use Zone, where all fishing, harbor, recreation and commercial activities are authorised.

The southern portion of the Whyalla region is subject to special purpose zones for harbour activities.

The Restricted Water Bodies Area which extends around the Port Bonython Jetty is shown on Figure 2.6.

In addition, the State Government has implemented a temporary closure (since March 2013 and officially until 15 February 2017) to cuttlefish fishing which extends to the whole of the northern Spencer Gulf (refer Figure 2.7), in order to facilitate ongoing research into the behaviour of the cuttlefish.

Whether this is due to the temporary closure or not, it is noted that the 2014 records show an increase of cuttlefish to 57,317, as compared to 13,492 in 2013.
2.4 Recreation & Tourism Activities

The Study Area has a long history of accommodating recreation uses. Dating back to the late 19th century, day excursions were organised from Port Pirie and Port Augusta to Point Lowly to spend the day fishing, boating, crabbing etc. During the 20th century, a holiday camp used to host smelter workers and their families from Port Pirie, at Weeroona Bay. The camp was relocated to Weeroona Island in 1929.

Existing recreation assets are identified on Figure 2.8 and include:

- Lighthouse complex, which includes two cottages that are presently used for accommodation purposes. These are owned and managed by the Whyalla Council, following a number of years under the management of Uniting Church;
- Camping grounds at Point Lowly, including showers, toilets, and playground. These are managed by the Council;
- Adjacent to the camping grounds are a marina and two boat ramps, one being for leisure boats and the other for commercial/fishing boats;
- A number of bush camping sites along the coastline between Point Lowly and Fitzgerald Bay;
- A number of diving spots along the southern coastline, particularly within the Sanctuary Zone which is known as the breeding area for the Giant Cuttlefish; and
- A walking trail known as the Freycinet Trail of a length of approximately 8 kilometres. The trail extends from Point Lowly to the southern portion of Fitzgerald Bay.

Weeroona Bay, is now closed to the public being located within the buffer zone to the Santos plant.

Figure 2.8: Recreation and Tourism Infrastructure
These recreation and tourism assets encourage a range of activities in the Study Area:

- Recreational fishing;
- Boat launching - fishing;
- Camping - formal and informal;
- RV;
- Snorkelling and diving;
- Hiking and cycling; and
- Four wheel driving, mountain biking and motor biking, using formal and informal tracks across the Study Area. Tracks are shown on Figure 2.9.

It is further noted that some areas are informally used for four-wheel driving.

Whilst a marina and formal boat ramps exist at Point Lowly, a number of users launch their boats directly from the beach, particularly at Fitzgerald Bay.

A range of formal and informal activities occur off-shore from the Study Area. These include:

- Fishing - on and off shore, noting that charter trips are organised for visitors. Locals tend to use their own boats;
- Diving/snorkelling, noting that diving/snorkelling/dolphin trips are organised for visitors; and
- Kayaking, windsurfing, and other aquatic activities.

### 2.5 Access

As identified by Figure 2.9, the Study Area is only accessible via Point Lowly Road, a sealed road which connects with the Lincoln Highway.

Fitzgerald Bay Road (or Gulf View Drive) connects from Point Lowly Road, providing direct access to Fitzgerald Bay. The road then continues unsealed along the Bay and the coastline, with the exception of a sealed portion at Backy Point.

The road physically continues north of Point Douglas, however it is within land controlled by the Department of Defence and is now permanently closed to the public. Discussions have occurred in the past to open this road to the public however such an outcome remains unlikely, which was confirmed during the consultation process for this project.

---

**Figure 2.9: Road Infrastructure**
The Point Lowly Peninsula also accommodates a number of other minor roads and tracks, which are used for four-wheel driving.

The roads are generally unsealed and are in average to poor condition. It is noted that the Council is in the process of bitumising some sections of Gulf View Drive which will enhance the function and use of this road.

2.6 Zoning

The Land Use Zones which apply to the Study Area are shown on Figure 2.10, with a description of their primary objectives summarised in Table 2.1.
### Table 2.1: Zoning

</tbody>
</table>

The Point Lowly Settlement Zone Concept Plan Wh/1, as contained in the Whyalla (City) Development Plan applies to a portion of the Study Area. This Concept Plan is reproduced as Figure 2.11.

Offshore, portion of waters adjacent to the Study Area are located within the Aquaculture Zone. These areas are identified in Figure 2.10, and were used for aquaculture for a number of years, however are not currently active. Some operators have active leases/licenses which are valid until 2023.

An aquaculture exclusion zone exists which provides a buffer between aquaculture development, other marine resource uses and areas of high conservation significance. This zone includes:

- A 1 kilometre buffer around Port Lowly which incorporates three shipwrecks; and
- A one kilometre buffer around Backy Point and south along the beach in order to protect aboriginal heritage sites.

Clean Seas and Southern Star Aquaculture have indicated that their kingfish farming activity could resume in the short to mid term at Fitzgerald Bay. Associated land infrastructure would be necessary and is likely to comprise:

- Office buildings;
- Shed/warehouse; and
- A new boat ramp, jetty and wharf.

Such future land infrastructure is likely to be established between Fitzgerald Bay and Point Lowly.
2.7 Indigenous Land & Heritage

The Study Area is significant to the local aboriginal community. The Spencer region is the traditional land of the Barngarla people, who gained Native Title in 2015.

A vast portion of the Study Area is therefore subject to Native Title, which Native Title has however been extinguished on Defence and industrial land. Such is identified on Figure 2.12.

Native Title has also been extinguished in that portion of the State Government owned land adjacent False Bay, which is under the care and control of the City of Whyalla.

Registered and reported Aboriginal heritage sites are shown on Figure 2.12, noting that other sites may exist within the Study Area.

There are sites along the coast, predominantly located near Fitzgerald Bay, that are culturally significant to the Barngarla people.

The sites are both archaeological and mythological and predominantly include the Seven Sisters Dreaming track, which begins in Whyalla and extends north to Coober Pedy. Sites along the coast include, for example, fish traps and camp sites.

3. STRATEGIC CONTEXT

3.1 South Australian Planning Strategy - Eyre and Western Region, 2012

The Planning Strategy identifies the planning priorities, principles and policies necessary to achieve community and economic targets outlined by the South Australian Government. The key principles of the Plan that are relevant to this Master Plan are listed below:

- Recognise, protect and restore the region’s environmental assets. The Plan considers the importance of marine parks and coastal areas, and the need to protect them, and recognises the importance of the Australian Cuttlefish spawning congregations. Scenic landscapes are also regarded as an important regional economic and recreational driver and should be protected;

- Strengthen the commercial fishing and aquaculture industries. Fitzgerald Bay is recognised as an area with “significant potential” for aquaculture. Whyalla is generally recognised as an area with potential for fish processing;

- Reinforce the region as a unique and diverse tourism destination. Key aspects to retain and improve encompass “a unique and diverse range of nature-based visitor experiences related to its scenic landscapes, ecotourism and unique wildlife, as well as coastal recreation, seafood, adventure tourism and Aboriginal culture”. Opportunities may include trail networks (walking, cycling, scenic, four-wheel drive), ecotourism experiences, conservation reserves, cultural facilities, accommodation and food businesses and co-located experiences with other sectors (e.g. industry, aquaculture);

- Provide and protect industrial land to meet projected demand. Whyalla is recognised as the region’s major industrial hub and should be maintained as such. Defence facilities are also considered, with the need to establish appropriate buffers; and

- Identify and protect places of heritage and cultural significance, and desired town character. Places and items of significance should be identified and protected.

It is acknowledged in the Planning Strategy that economic development needs to be supported by adequate infrastructure.

3.2 SA Tourism Plan 2020

The State Government seeks to maximise the benefits of tourism for the South Australian economy, and aims to grow visitor expenditure to $6.7b by 2020 (as compared to $5.2b in June 2014). The SA Tourism Plan 2020 forecasts strong growth in overseas and interstate expenditure, with a slower growth in intrastate spendings.

When releasing the Plan, the State also announced the aim to reach a total of 41,000 direct jobs in tourism (i.e. a growth of 10,000 jobs since December 2013).

The Plan recognises the importance of marketing and promotion, as well as the need to grow off-peak visitation and to leverage off existing infrastructure and assets.
3.3 SA Nature Based Tourism Action Plan

The SA Nature Based Tourism Action Plan recognises the opportunities that exist to link tourism and conservation areas without endangering natural assets.

Research used to inform the Plan showed that “all trips that include a nature-based activity account for $1.1 billion in expenditure in SA each year”. The goal of this Plan is to increase this value to $1.45b by 2020 and generate 1,000 new jobs (since 2015).

Nature-based tourism is already a significant contributor to some regional economies but may be improved via the following actions which are relevant to this Master Plan:

- **Action 1**: Support existing and create new nature based tourism experiences; and
- **Action 4**: Raise awareness of South Australia’s unique appeal.

The importance of adequate and/or new infrastructure, promotion and marketing, and local/regional support is noted with a particular focus on walking journeys and marine experiences.

3.4 RDA Regional Plan 2014-16 and Annual Report 2013-14 and 2014-15

In RDA’s Regional Plan 2014-16, economic development is described as a key priority, with key opportunities for the region identified as mining, manufacturing, and renewable energy development. Tourism is also described as a key growing sector.

The RDA region is “world renowned for its premium seafood product” and launched a brand ‘Eyre Peninsula Australia’s seafood frontier”, which was awarded an SA Tourism Award in 2014.

Whilst fishing and aquaculture are relatively small employment sectors compared to other industries, “there is substantial opportunity for further growth through marketing the region as a culinary tourism destination”. Generally, the region focuses on the promotion of nature-based experiences.

This is consistent with the below regional priorities that are relevant to the Master Plan:

- Consider the environment when planning regional development: the environment should be preserved and enhanced and is considered as a key leverage for tourism, especially the coastal environment; and
- Strengthen, foster and promote the region’s business and product diversity: tourism would increase the region’s competitiveness and reputation.

The RDA supported the preparation of a design study for a Cuttlefish Interpretive Centre and interpretive redevelopment of the Visitor Centre. Due to lack of funding, this project has been put on hold.

In 2014-15, the RDA supported tourism-related projects in Whyalla, including the preparation of a background paper for the development of a Cuttlefish Interpretive Centre and a business case for the redevelopment of the Visitor Centre (refer 2.12).

3.5 Spencer Eyre Peninsula NRM Sub-Regional Plan – draft

The Eyre Peninsula NRM Board is currently updating the Sub-Regional Plan for the Spencer area. This area extends west from the Spencer Gulf to the foothills of the Middleback Ranges, and south to the Munyaro Conservation Park.

This document identifies the importance of the Northern Coastline of Whyalla, and describes it as:

“particularly cherished by locals, with places like Point Lowly and Fitzgerald Bay being “post card stuff, it’s just gorgeous’. The area “makes you feel that this is something different - with the pebble beaches, mangroves, clear waters and the backdrop of Flinders Ranges, it’s unique and very special”. A particularly unique and valued feature is the shingle stranded dune that runs along Fitzgerald Bay, with one community member saying this needs to be “recognized as a geological feature with Aboriginal significance.”
It also has historical significance with the lighthouse and the associated cottages provided a great place for holidays.

Other aspects that are relevant include:

- The marine biodiversity (cuttlefish and dolphins);
- The area is well suited to a range of activities (e.g. fishing, diving, wind surfing, sailing, swimming, bird watching); and
- Commercial fishing and aquaculture activities, which are a “source of livelihood for some”.

The draft plan also identifies a number of issues in the Spencer subregion that are relevant:

- Coastal degradation as a result of human impacts including:
  - off-road vehicle damage (e.g. 4WD and quad bikes);
  - litter from land and marine sources;
  - stormwater; and
  - visitor access management;
- Land use conflict between the highly valued Northern Coastline and the future industrial development relating to the Port Bonython expansion. Maintaining the Northern Coastline for recreational use is considered key for the “liveability of Whyalla”; and
- Need for economic diversification for Whyalla.

### 3.6 Regional Climate Change Adaptation Plan for the Eyre Peninsula

The Regional Climate Change Adaption Plan refers to previous investigations to state that:

"The Eyre Peninsula will be impacted by climate change through warmer and drier conditions on the land, rising sea levels on the coast and changing temperatures and pH in the Great Southern Ocean and in Spencer Gulf".

This is likely to impact in multiple ways on the Study Area, given its coastal location, and on some aspects of the Master Plan, given the importance of recreational fishing and diving for tourism in the area.

The Plan focuses on eight issues, including four that are relevant to this Master Plan:

- Conservation management: large scale refuges within the region will need to be created;
- Fisheries: climate change may displace fishing fleet and infrastructure, with a range of potential positive and negative environmental and economic impacts on the region;
- Management of coastal development: some areas will be subject to sea level rise and new development may be prevented in some areas and redirected to safer land, whilst existing development will need to be adapted and/or protected; and
- Port and wharf facilities: a new port and wharf facility for the Eyre Peninsula is expected by 2023.
3.7 Eyre Peninsula Coastal Action Plan and Conservation Priority Study

The Eyre Peninsula Coastal Action Plan and Conservation Priority Study seeks to understand the region’s coastal natural resources and potential threats and opportunities for more effective management. The coastal zone was divided into 85 cells to facilitate the assessment. The relevant cell to this study is cell EP2 Port Bonython, i.e. the coastal reserve between Backy Point and Black Point.

Throughout cell EP2, environmental assets include the presence of the cuttlefish breeding area, and the stranded shingle beach ridges found along Fitzgerald Bay.

The assessment of cell EP2 found that Point Lowly was subject to the highest concentration of threats within this cell, with:

- Weed infestation;
- Dune erosion from vegetation loss and beach recession;
- Marine debris;
- Uncontrolled RV use and camping, including firewood collection; and
- Future industrial expansion.

The report provides suggestions to improve the management of the area, including weed control, dune blowout management, and closer monitoring.

- In respect to camping, the preparation of a camping management plan or the formalisation of camping zones was suggested, as well as improved signage, fencing and weed management;
- In relation to RV activity, the development of an access/traffic management plan and the upgrade of tracks or car parks, with better signage, were also predicated. It is noted that a Study is presently being undertaken for the whole of the Eyre Peninsula in relation to coastal access (see Section 3.8);
- In respect to both residential and industrial developments, it should be ensured that impacts on the environment are minimal with limited footprints, tracks and discharge to the marine environment; and
- Interpretive signage, driving strategy and management of fauna/flora should generally be a priority for the coastal reserve area, including the beaches.

3.8 Eyre Peninsula Coastal Access and Off-Road Vehicle Strategy

This strategy aims to improve the management of coastal access in the region. It is being prepared at the same time as this Master Plan. Action Plans arising from the Master Plan should have regard to the outcomes of this strategy.
3.9 Upper Spencer Gulf Marine Park Management Plan Summary

As shown on Figure 3.1, the broader locality is subject to a range of Marine Park Zonings, including:

- SZ-5 Sanctuary Zones Cuttlefish Coast, which allows general navigation, recreational activities such as diving, boating, walking, surfing, but restricts a number of activities (no recreational or commercial fishing, competitions and organised events etc). It further restricts coastal development and infrastructure such as marinas, jetties, pontoons, breakwalls, renewable energy infrastructure. Subject to permits or limits, it allows tourism operations, domestic animals, research and non-fishing competitions or events;
- SPA -5 Harbor Activities;
- SPA-8 Shore-based recreational line fishing;
- GMUZ-2 General Management Use Zone, with no particular exception except for mineral or petroleum processing; and
- Cephalopod fishing closure area (including squid, cuttlefish and octopus), which encompasses the southern portion of the Study Area, west of Point Lowly.

Arising from the above, there are no real constraints for tourism activities, the exception being restricted recreational fishing in that portion of the Sanctuary Zone that is not within the Special Purpose Area (i.e. to the east of Black Point and to the west of Port Bonython).

While it is noted that no coastal development and infrastructure is permitted in the Sanctuary Zone, including tourism infrastructure such as jetties or pontoons, it is further understood that a permit system could enable activities such as tourism operations, organised events and moorings in such zones.

3.10 Eyre Peninsula Destination Action Plan (DAP) 2012-2015

The Eyre Peninsula Destination Action Plan identifies that the region attracts a mix of intrastate, interstate and international visitors, with some of the highest predicted growth in the state, despite low consumer awareness. Opportunities exist in relation to:

- a growth in the region’s seafood product brand and experiences;
- a growth in fly-in market;
- raising awareness with additional marketing and promotion, including the ‘seafood frontier’ brand with promotion and events;
- creating new nature-based and/or self-drive and/or culinary experiences; and
- ensuring an adequate tourism industry with bookable operators (through agents and online) and marketing.

The DAP also identifies that all strategic gaps had been addressed in relation to RV facilities.
However, there may be opportunities to further attract this sector, to the Study Area (e.g. with the establishment of running water, waste water dumps).

### 3.11 Whyalla City Council Strategic Plan 2015-16 to 2019-20

The Council seeks to support a diversified and sustainable economy and to attract future industries such as manufacturing and mining.

The Whyalla Foreshore is also considered as a key recreational, fishing, commercial and residential area which should be further enhanced with hotel and conference facilities.

Tourism and branding are identified as part of Council’s Top Ten Priority Listing.

Council seeks to develop tourism in the city and the wider region, by taking a “leadership role”, by supporting events, enhance the image of the city as a destination and expanding the range of accommodation.

Landscapes should also be managed and protected in order to ensure that “developments in areas of high natural value are sympathetic to the natural environment”.

### 3.12 City of Whyalla Tourism Strategic Plan 2015-18

The Tourism Strategic Plan is based on five strategic themes which are all relevant to the Master Plan:

- Provide an environment conducive to investment and growth;
- Develop sustainability, infrastructure and capacity, with marine environs considered as essential to the visitor experience;
- Seek to provide the best in visitor experiences;
- Increase visitor numbers arriving by air and road, through marketing and product development; and
- Develop and build events capacity and capability.

It is noted that the Point Lowly Lighthouse and cottages and the Northern Coastline in general are listed as tourism assets.

The Plan also identifies key potential niche market opportunities to capture Experience Seekers:

- Eco & marine tourism; nature based;
- Visiting Friends and Relatives (VFR);
- MICE - Meetings, Incentives, Conferences and Events;
- History and heritage; and
- Industrial and educational tourism.

In order to achieve the above strategies, the Plan provides “Game Changing Projects”. These included the development of a Master Plan for the Northern Coastline, and other projects which should inform this Master Plan, including:

- a Marine Discovery Centre, potentially co-located with a new Visitor Information Centre;
- a hotel Complex, at the Whyalla Marina;
- a Whyalla Industry Heritage Centre, developed inside the existing Maritime Museum Precinct;
- a Tourism Hub, within the Whyalla Marina precinct;
- the development of value-adding experience at Point Lowly; and
- the rebranding and repositioning of Whyalla, taking into consideration key themes such as industrial history and the cuttlefish.

### Key Findings

A high level of consistency exists between the various strategic documents. Key themes emerging from the strategic review include:

- Build on natural and cultural heritage;
- Grow eco-tourism, with nature-based tourism, particularly marine experiences, including the Cuttlefish;
- Grow the seafood industry and aquaculture;
- Protect the environment and biodiversity, prevent future degradation and minimise the effects of climate change; and
- Raise awareness and promotion.

---

7 Experience Seekers are described as experience international travellers, who seek original, varied, active (if not adventurous) and personal experiences, in contrast with their day-to-day lives (Tourism Australia).
4. **Socio-Economic Context**

4.1 **Demographic Context**

4.1.1 **Population**

Based on the ABS Census, Whyalla had a population of 22,088 in 2011, down from approximately 33,000 during the flourishing shipbuilding years in 1975-76. Following closure of the shipyards in 1978, the population started to decline, with rises and falls occurring in response to local economic factors.

The Estimated Resident Population of Whyalla was 22,759 persons in 2015.

Key characteristics are highlighted in Table 4.1.

The population of Whyalla is relatively young compared to the South Australian average, with a smaller proportion of people over 60 years of age, and a median age of 38 (39 in SA).

Incomes but also cost of living is comparatively lower in Whyalla.

Whyalla is listed in the second lowest decile of the Index of Relative Socio-economic Advantage and Disadvantage.

The Index of Economic Resources (IER) summarises variables relating to the financial aspects of relative socioeconomic advantage and disadvantage. These include indicators of high and low income, as well as variables that correlate with high or low wealth. Whyalla is listed in the lowest decile of the IER.

The Index of Education and Occupation (IEO) summarises variables relating to the educational and occupational aspects of relative socio-economic advantage and disadvantage.

This index focuses on the skills of the people in an area, both formal qualifications and the skills required to perform different occupations. Whyalla is listed in the lowest decile of the IEO.

Source: ABS Census 2011

An area ranked in the lowest deciles indicate high levels of disadvantage.
4.1.2 Employment

Key industries of employment in 2011 are identified in Table 4.2 below.

Basic Ferrous Metal Manufacturing was evidently the major industry in 2011.

It is further noted that the number of businesses has decreased in every industry between 2012 and 2015 with the exception of financial services (ABS 81650).

As shown by Table 4.3, unemployment fluctuated between 2011 and 2016, with quarterly peaks of 10% in 2014, and a rate of 9.2% (6.7% in SA) as of September 2016 (Australian Department of Employment).

4.2 Manufacturing & Mining Industries

Manufacturing and resource processing is the largest industry sector in Whyalla. Whyalla is the key regional centre for manufacturing, steel production and resource processing in the Upper Spencer Gulf region.

The sector employs 3,331 people accounting for 13.5% of regional employment. The future of steel making in Whyalla is uncertain with Arrium recently being placed into receivership.

The growth of the mining sector in the region will also generate potential benefits for the Whyalla economy.

Other employment generating activities are being investigated in the region, including renewable energy projects.
4.3 Fishing & Aquaculture Industry

The Eyre Peninsula is by far the leading region in the aquaculture sector in South Australia and has a noted reputation as a seafood producer. The region’s commercial fishing and aquaculture industries in the Eyre Peninsula provide approximately 80% of South Australia’s seafood product\textsuperscript{12}. The combined value of this industry exceeded $200 million in 2014\textsuperscript{13}.

Specifically, two main aquaculture zones exist offshore from the Study Area, which are partially being operated.

Active licenses and production leases exist for the farming and establishment of sea cages for Finfish, yellow tail kingfish and snapper. These are held by Clean Seas Tuna Ltd/Clean Seas Aquaculture Growout Pty and Southern Star Aquaculture Ltd.

Some licenses expired in February 2016.

A sizeable portion of the existing aquaculture zones are not currently under any lease or license.

It is anticipated that Kingfish farming activity will resume in the coming years at Fitzgerald Bay, with land-based facilities to be established between Fitzgerald Bay and Point Lowly.

It was indicated during consultation that other aquaculture activities (mussels for example) had potential in the area.

The Department of Primary Industries and Regions, SA (PIRSA) has also indicated that there was potential for Whyalla to develop its land-based aquaculture activity.

The industry provided a total of 1,211 FTE aquaculture in 2012/13, which represented more than 80% of total jobs in this sector in South Australia.

The RDA WEP and the Eyre Peninsula food industry have developed the “Eyre Peninsula, Australia’s Seafood Frontier” brand which seeks to promote the region’s products and traders.
4.4 Tourism Sector

4.4.1 Contribution to the Economy

The tourism sector is growing in the Eyre Peninsula region which was ranked fourth overall in the comparative importance of tourism across SA’s regions in 2013-14, supplying 4.6% of the state-wide contribution of tourism.

The sector was estimated to contribute $293 million to the regional economy in 2013-14.

Total tourism expenditure reached $568 million in the same period (of which $208 million in direct output).

In terms of contribution to tourism, long distance transport, retail food businesses and fuel were the key items of tourism consumption.

4.4.2 Employment

The tourism industry directly employed approximately 1,500 persons (including 46.4% full and 53.6% part time) in 2013-14, representing 6.4% of regional employment, and another 1,500 persons (including full and part time) indirectly.

Direct employment that contributed most to regional tourism employment was primarily at food and beverage retail, other retail trade and accommodation.

4.4.3 Businesses

A total of 150 tourism businesses were recorded in Whyalla in 2013, of which 8 were recorded as tourist accommodation (hotel, motel or serviced apartment of more than 15 rooms). These 8 establishments supply more than 35% of the regional room and bed stock, and employ a total of 222 persons. This does not reflect other types of accommodation such as caravan parks (two in the Whyalla township) or holidays rentals (at least two advertised as such in the Study Area).

4.4.4 Airport

The Whyalla airport is a key asset for accessibility to the Region. Both Rex Airlines and Qantas Link provide services to and from Whyalla.

With respect to passenger profile, the master plan prepared in 2014 highlighted the below characteristics:

- Importance of mining and resources industry aged between 25-44; and
- The traveller makes an average four annual trips to Whyalla, with a length of stay between 1 and 7 days, and stays in a hotel/motel.

Commuters and short-term/fly-in fly-out workers are the key market segment for the airport, with holiday-makers more inclined to road transportation.

4.4.5 Previously Identified Tourism Opportunities

Cuttlefish Interpretive Centre

A Scoping and Design Study was undertaken in 2012 to determine the viability of an interpretive facility.

Key characteristics of the proposed Centre are outlined below:

- The Centre should consider the broader marine environment of the Upper Spencer Gulf, without only focusing on the cuttlefish;
- The facility could be split into a number of strategic locations, with one main Centre and satellite smaller facilities;
- Boat and diving tours are essential to maximise the experience; and
- Commercial and/or community facilities may be integrated.

---

14 Tourism SA/TRA, Regional Tourism Satellite Account Eyre Peninsula 2013-14
15 Tourism SA
16 Ibid
17 ABS, Tourist Accommodation, Small Area Data, SA, June 2013
18 The Airport Group, Whyalla Airport Master Plan, 2014
The analysis considered two sites located at Point Lowly and on the Whyalla Foreshore. Indicative cost plans were also prepared for both options:

- **Option A:** Main facility on Lowly Peninsula, with associated satellite facilities on the Peninsula including a research lab, and in Whyalla. Option A1 looked at a Centre constructed over water, and Option A2 at a Centre constructed on land; and

- **Option B:** Main facility at the Whyalla foreshore, with associated satellite facilities in Whyalla including an exhibition space, and on the Peninsula.

As previously mentioned, this study could not be progressed further, due to lack of funding, and does not consider the cost of the design and installation of interpretive displays.

However, a Background Paper was prepared in March 2015 which analysed the benefits of a Cuttlefish Interpretive Centre (CIC). Key elements of the Paper are listed below:

- The CIC is considered as both a catalyst for economic development and an opportunity to change the negative image of Whyalla. It would become Whyalla’s key attraction;

- The Point Lowly location is not considered viable due to lower potential visitor numbers, and would not create the same benefits for the wider Whyalla region;

- A research laboratory would also be built at Point Lowly;

- The Visitor Centre is best located at its existing location, with potentially some satellite elements of the CIC to be integrated;

- Interpretive elements were estimated, bringing the total cost of the facility to approximately $20 million; and

- The CIC is likely to secure government funding.

A report prepared by Andrew Robertson Marketing & Consulting for the SA Tourism Commission assessed the tourism potential and commercial fishing potential of the cuttlefish at Whyalla in order to estimate the likely economic benefits of these activities.

From a tourism perspective, it was estimated that the cuttlefish tourism in Whyalla “generated $580,000 in 2002” without any promotion or tourism effort, and “could increase to $1.076 million” within five years with the development of an appropriate strategy.

Target markets were identified as below:

- Dive and snorkelling market;

- Accompanying members; and

- Eyre Peninsula drive market (domestic and international).

An increase of 19% in visitor numbers on Whyalla’s total holiday/leisure/VFR visitor numbers of 40,000 was forecast (e.g. an additional 7,600 in 2008), as well as an increase of 9% in total visitor nights (e.g. an additional 12,330 nights in 2008), representing an additional $829,870.

The report also investigated the infrastructure requirements necessary to develop activities around the cuttlefish theme:

- Improving the Point Lowly facilities, including the boat ramp (this has been addressed), and other basic facilities (toilets, car park);

- Improving the road along Fitzgerald and False Bays;

- Pontoons off Black and Stony Point, basic facilities (e.g. toilet) and car park;

- Signage; and

- Accommodation near Point Lowly and a major interpretive centre.

---

Dolphin Research Centre
A Dolphin Research and Tourism Centre for Whyalla has recently been proposed and considered by the City of Whyalla.

While environmental concerns remain, the proposal is supported in principle by the South Australian Government particularly considering the likely economic benefits this would have, noting anecdotally that the Monkey Mia resort in WA attracts 100,000 visitors a year.

The City of Whyalla has indicated its support for the development of an integrated facility including a Cuttlefish Interpretative Centre / Marine Discovery Centre with a mixture of commercial and research elements (e.g. retail/café, exhibition, tourist information and research etc).

Artifical Reef
Federal Defence is proposing to decommission a number of vessels and offer them to State Governments. While there has been no formal discussions between Council and the State Government, the topic was raised at one of Whyalla Council’s meetings and the following motion was passed: “That Council write to Senator Marise Payne to express interest in one of the two ships HMAS Tobruk and Sydney to be used as an artificial reef in our Gulf for recreational divers.” Two years of decommissioning work to strip and prepare the boat for sinking are likely to be required, with an estimated cost of $10 million, and an associated employment of 50-80 workers.

Long term economic benefits will also occur from this artificial dive site.

Whilst three shipwrecks exist off Point Lowly, these have been described as having little potential to attract divers given their condition.

Cuttlefish Drive Project
Funding for improvements to the Cuttlefish Drive area has been obtained from PIRSA. The improvements seek to enhance the diving experience in the area and the overall marine experience.

The proposed built infrastructure remains light and discreet and seeks to emphasise the unique views. The key node is located at Stony Point adjacent to the Santos fence line. A range of basic infrastructure was proposed including (tables, access ramp, parking, signage, etc). Portion of the funding was approved during the course of this project. The inclusion of toilets is also being considered.

Key Findings
• Unemployment in Whyalla is higher than the South Australian average;
• Traditional industries (steel making) are at risk;
• There is opportunity to diversify the economy particularly in the aquaculture and tourism sectors;
• Holiday-makers are more inclined to road transportation rather than flying to get to Whyalla; and
• Existing tourism proposals area already being discussed at the local, State and Federal levels.

Source: SWA
5. **Tourism Market Analysis**

This chapter examines data and information obtained from Tourism SA to inform the nature and characteristics of the tourism market in Whyalla. It also includes information provided during the stakeholder engagement process which informed these investigations (refer Section 6).

The importance of the tourism industry to South Australia cannot be underestimated. Tourism currently contributes some $5.6 billion in tourism expenditure to the South Australian economy and represents some 2.5% of Gross State Product. This figure has been steadily increasing and is expected to increase further in accord with Government policy, initiatives and targets.

Tourism industry provides direct employment opportunities across a broad range of areas suiting personnel with varying skills sets and education levels i.e. spanning drivers, tour guides, travel agents, interpreters, hospitality and marketing and product development staff.

Tourism Research Australia forecasts have predicted an annual growth of 24% in domestic visitor nights (to 17 million nights) and 65% in international visitor nights (to 3 million nights), outside of Metropolitan Adelaide, over the next ten years in regional South Australia.

In order to inform the a Master Plan for the Northern Coastline, it is important to understand the broader Eyre Peninsula context, as opportunities may exist to capture portion of the wider region's tourist population.

Additionally, and while the majority of this analysis will focus on Whyalla and the Northern Coastline, investigations have also considered the Port Lincoln market. This has been undertaken on the basis that a large proportion of visitors to Port Lincoln and indeed Whyalla are potentially part of a broader “east-west” road trip.

Those visitors to Port Lincoln are therefore a market segment of relevance to Whyalla with it therefore important to understand their characteristics.

---

5.1 **Broad Market Trends**

A number of visitor and segment trends in South Australia, Australia and internationally represent an opportunity for the Northern Coastline.

**Aquatic and coastal environment**

The aquatic and coastal environment is a key theme which particularly echoes with the image of ‘Australia’ overseas. International visitors expect to explore marine environments when they visit the country. This theme is a key strategy for Tourism Australia and Tourism SA. It is also an expectation for domestic visitors and, in the case of Whyalla, local residents, who enjoy active coastal experiences (boating, kayaking, fishing etc). This also includes divers, who are perpetually looking for new exploring opportunities.

It is noted that beach and coastal environments are a key marketing focus for Tourism Australia.
Nature-based tourism

Nature-based, sustainable and environment-friendly activities are an increasing sector across all generations.

Visitors, both internationally and Australian visitors, increasingly seek landscape and nature-based activities. This is partly explained with the rise of senior tourism, a segment that enjoys low-impact activities (walking, cycling, bird watching etc).

Adventure activities in general is a rising trend, with the recent emergence of adventure parks, ziplines, and other environment-friendly attractions which are an attraction for both visitors and local residents.

A review of studies on the economic impact of nature-based tourism is summarised in Table 5.1.

Notwithstanding, the cost per night for international visitors is also higher for nature-based tourists ($166 per night, compared to $132 for non nature-based). This is however not reflected in domestic trends, where expenses per night or per trip are similar amongst both nature and non nature-based markets.

Domestic travellers and particularly RVers also look for natural environments and isolated landscapes.

Recreational vehicle visitors

A review of studies on the economic impact of recreational vehicle visitors is summarised in Table 5.2.

Key criteria that are likely to be considered by RVers when selecting a destination:

- Proximity to a service centre with appropriate car parking and a Visitor Information Centre;
- Safe and quiet spaces;
- Sufficient space for manoeuvres;
- Access to potable water; and
- Access to a dump point and a tap.

RV tourists are likely to keep their itineraries flexible. Opportunity therefore exists to capture this market with appropriate signage and marketing.

While Whyalla is listed as a RV friendly town already, it would be necessary to improve existing marketing and promotional strategies to this market, and the promotion of the Northern Coastline to this market.

</table>
Diving

Divers represent a limited niche market, noting that snorkelling is a more popular activity which is easier to spread amongst a wider range of potential markets. International diving travellers are known to be high yield visitors who stay for extended periods.

The economic contribution of diving in Australia was estimated at $4.2b in 2015. While domestic dive tourists stay only a limited time and only slightly longer than non-diving tourists, they spent almost three times as much, with $2157 per diving trip vs $762 per other trip.

International dive tourists in Australia spend 30% longer than non-diving tourists, and spend 80% more than non-dive tourists on average ($4949 vs. $2765 per trip).

It is noted that a ship wreck may trigger a significant increase in dive-related tourism. Previous research (refer to Table 5.3) undertaken identified the following demands and benefits for various sunk ex-HMAS vessels.

In the case of the ex-HMAS Brisbane, the average spending per diver was estimated at $878.73 for tourists and $343.59 for locals.

It is also noted that in 2015, 308 dive permits were issued for HMAS Hobart (off Wirrina Cove), and 206 permits were issued from 1 January to 18 November 2016.

A review of studies on the economic impact of diving is summarised in the Table 5.4.

Food and wine

Food and wine is a major factor influencing holiday destination decisions.

It is noted that food and wine is a key marketing focus for Tourism Australia, as well as for Tourism SA with the Seafood Frontier Strategy. There is therefore potential for food and particularly seafood enthusiasts to become a growing segment. This segment is likely to include higher yield visitors, and year-long visitation.

Supported activities include fishing industries, diving/boating/fishing charter operators, restaurants.

Businesses need to take part in this Strategy and participate in showcasing existing product.

24 Break O’Day Council, Break O’Day Business Enterprise Centre and St Helens Chamber of Commerce, Proposal for Relocation of the Ex-HMAS Tobruk (II) to Skeleton Bay, Tasmania, as a New Artificial Reef and World-Class Dive Tourism Site, 2016

25 Dive demand is based on the actual estimated purchases of dive permits. Visits to the dive site by outdoor boating groups represent additional visitor demand, which is not included. Families of divers regularly visit the dive sites and are not included in the estimated demand.
**Cycle tourism**

Cycle tourism is an increasingly popular activity for both domestic and international visitors (from Europe largely), as groups or independent travellers. Cycling may be the primary (pre-planned trip, organised tour, cycling event) or secondary purpose as one of a multiple activities undertaken during a trip (day touring, casual cycling).

In comparison to other tourists, cyclists are more likely to stay for an extended period of time and spend more than $2000 on a trip. Anecdotally, domestic cycle tourists spent over $213 million in Australia during 2004-2005.

It is noted that 19% of the South Australian population cycles, whether regularly or occasionally, 30% of which are from the AB (Affluent & Educated Audience) quintile.

A subsection of cycle tourism relates to Mountain Biking.

Mountain bikers include:

- Core mountain bikers (experienced riders who will travel to riding destinations);
- Non-core mountain bikers (families, groups, visitors in search of a different experience); and
- Local mountain bikers, who would regularly ride a mountain bike within a 40km radius of their home.

Non-core and local riders form a broad market. In Whyalla, it is noted that cycling/mountain biking occurs to the top of Hummock Hill, and down to the turn off to Iron Baron. A new destination for local residents may represent a new opportunity.

Cycle tourism may be improved and/or driven by:

- Appropriate signage;
- Built attractions/historic sites;
- Natural attractions, landscapes, views;
- Information – maps indicating attractions, toilets etc;
- Overnight stay opportunities;
- Variety in trails; and
- Secure infrastructure – bike racks.

A review of studies on the economic impact of cycling is summarised in the Table 5.5.

It is also worth noting that cycling tourism increased by 33% between 2005/06 and 2012/13 in Australia.

While expenditure depends on the type of facilities that are available, particularly in terms of accommodation, and while the figures contained in Table 5.5 remain anecdotal, the key message is that the cycling market is likely to represent higher yield spenders, who can and will spend if they are given the opportunity to. The challenge will therefore be to provide facilities that are consistent with higher spenders’ expectations, without impacting on the environmental and cultural assets of the Northern Coastline.

### Table 5.5: Impact of cycling

27 Roy Morgan research
**Recreational fishing**

Recreational fishing is a major activity, with the Spencer Gulf attracting a large proportion of SA recreational fishers who form a population of approximately 277,000\(^{28}\). The value of recreational fishing in SA was estimated at $148 million in 2011\(^{29}\).

A review of studies on the economic impact of recreational fishing is summarised in Table 5.6.

---

### Table 5.6: Impact of Recreational Fishing

<table>
<thead>

</tr>
<tr>
<td>NSW</td>
<td>Refers to 1.46 day</td>
<td>Average number of trips was 8.75 per year</td>
<td>$222.82 average in NSW (approx. 60% for equipment, the rest for travel/ accommodation/ eating and other leisure expenses)</td>
</tr>
</tbody>
</table>

While the length of stay evidently depends on the profile (local vs interstate/overseas visitor), and while the figures contained in Table 5.6 remain anecdotal, the average spend per trip shows an opportunity for notable income generation.

---

### Four Wheel Driving

There is already a strong 4WD presence in Whyalla with the Whyalla & District 4WD Club hosting a biennial four-wheel driving event during the October long weekend. The event attracts participation from intra and interstate with upwards of 80 vehicles/150+ participants.

Research in relation to four wheel driving is thin, however it is important to understand that four wheel driving includes a range of market profiles:

- An activity for locals, which is unlikely to trigger direct expenditure;
- A mean to facilitate special activities such as bird watching;
- A mean to test the capabilities of a vehicle and skills of a driver;
- A transportation method for weekends or holidays to explore areas difficult to access.

Four wheel drive travellers are typically described as spontaneous, with flexible itineraries. The Northern Coastline is already accessible to four wheel drive vehicles, however opportunity exists to better capture this market with improved signage and marketing, together with defined routes to enhance the experience.

Notwithstanding, it is crucial to note that the protection of cultural, social and nature values of the Northern Coastline should not be put at risk by the development of four wheel driving. Sustainable and responsible four wheel driving should be prioritised, which would typically come at a cost (maintenance, establishing and repairing fences, cleaning up, signage etc).

The implementation of dedicated four wheel driving route(s) accessed by fee/permit is likely to compensate for the likely management and maintenance costs. Any devised strategy should support/be premised on the Leave No Trace initiative or Australian 4WD Code of Conduct.

---

\(^{28}\) RecFish SA  
\(^{29}\) Ibid.
Generation Y and social media

‘Millenials’, otherwise known as Generation Y, form the generation aged between 18 and 30. This segment is likely to be environmentally aware and cautious. Young travellers seek experiences and adventures in a natural environment. They are likely to use digital media to organise their trip, but also during (‘navigate’ and ‘show to peers’) and after their trip (‘report back to the community’). Word of mouth is particularly important with this segment.\(^\text{30}\)

As stated by Tourism Australia, social media is increasingly affecting the way Australians travel domestically:

“A significant number of the 10 million Australians on Facebook make travel decisions based on their friends’ social media activity, with 20 per cent of those surveyed admitting they had booked a domestic holiday as a result of viewing friends’ updates, photos and check-ins. More than any other age group, Generation Y was most likely to book a holiday based on the social media activity of friends.\(^\text{31}\)”

This was reinforced by leisure operators from Whyalla, who are active on social media and notice changes in visitor numbers based on social media exposure and activity.

Baby Boomers

Baby boomers are now entering retirement and represent a large segment of active potential holiday makers. This is likely to drive growth in intrastate and interstate visitation, particularly in the recreational vehicle market.

5.2 Visitation on the Eyre Peninsula

The Eyre Peninsula is one of the key tourism regions in South Australia and is promoted specifically in relation to sea life, sea food and marine experiences, as ‘Australia’s seafood frontier’, with Whyalla the “Northern gateway” to this region.\(^\text{32}\)

Tourism expenditure on the Eyre Peninsula shows a three year average to December 2015 of $260 million in visitor expenditure. This is expected to increase to $417 million by 2017 and $511 million by 2020.\(^\text{33}\)

5.2.1 Number of Visitors

As identified by Table 5.7, over the period 2012-2014, the region annually attracted an annual average of approximately 361,000 domestic overnight visitors, which accounts for approximately 7% of the domestic overnight market in SA, and 13,000 international overnight visitors, which accounts for 3.5% of the overnight international market in SA.

It is also noted that 355,000 day-trippers visit the region.

Overnight visitor numbers have not increased since the mid 2000’s as researched by TRA. Interstate visits have declined, which is a consequence that can be seen across Australia of both the GFC and the higher value of the Australia dollar which has encouraged Australians to travel overseas.

International visits have remained stable (11,000 in 2002, as shown in the Strategic Infrastructure Plan for SA dated 2005).

Source: Regional Tourism Profile December 2012 - 2014
5.2.2 Profile of Visitors

Of domestic visitors, approximately 35% are Adelaide-based, and another 40% from elsewhere in South Australia. The region is evidently dependent on the SA market.

With respect to international visitors, the extended length of stay reflects the multi-destination trips.

With specific regard to the domestic market, it is noted that:

• 30% stay at friends or relatives;
• 28% stay in hotels, motels and the like;
• 25% stay in a caravan/camping park; and
• 10% rent a property.

The majority of consumption in the Eyre Peninsula is contributed by domestic overnight visitors who spend the most per night ($250) on average.

5.2.3 Tourism in the Eyre Peninsula and Regional Comparison

Tourism contributes to 9.1% of the Eyre Peninsula’s economy, and to 12.4% of its employment, during 2013/14. Comparatively, tourism contributed to 13.3% of the Yorke Peninsula economy, and nearly 18% of its employment in the same period.

Notwithstanding, “from 2006-07 to 2013-14, tourism GVA grew most significantly in Eyre Peninsula (6.7%)”, and, considering the recent events in the steel industry, there is potential to grow the importance of tourism in the region. The recent promotional strategies will also support visitation growth.

Further comparison with the Yorke Peninsula suggests that the Eyre Peninsula has a much stronger presence in the interstate and international markets, with nearly three times more interstate overnight visitors and four times more international overnight visitors.

This is presumably explained by:

• the presence of larger cities on the Eyre that drive international and interstate visitation;
• more formalised attractions and activities;
• the fact that the Eyre region act as a gateway to the Nullarbor/WA region that is typically part of international visitors’ longer trips; and
• the fact that the Yorke Peninsula is promoted as a family/getaway destination for Adelaide/SA residents.

The self-drive tourism sector is also considered to have potential for future growth.

34 SA Regional Tourism Satellite Accounts 2013-14
35 RDA
5.3 Visitation in Whyalla

Only limited data is available to understand the existing tourism market in Whyalla. Data has been provided by Tourism SA specifically for this project. Other data used was published by Tourism Research Australia.

5.3.1 Number of Visitors

Visitation to Whyalla over the last 10 years averages 83,000 visitors annually.36

- Over this ten-year period, visitation peaked at an annual average of 91,000 visitors in 2008, and troughed in 2012 with 75,000 visitors; and
- In September 2015 an annual average of 87,000 visitors was recorded.

It is important to note that these visitation figures include short-term workers and do not reflect visitation in a pure leisure/tourism sense. Anecdotally, short term worker account for a significant proportion of overall visitor nights.

5.3.2 Profile of Visitors

- In the year ending September 2015, Whyalla attracted an estimated annual average of 84,000 domestic overnight visitors, who stayed approximately 308,000 nights;
- There were approximately 3,000 international overnight visitors to Whyalla for year to September 2015, representing 3% of overall visitors.
- On average, domestic overnight visitors to the Whyalla stayed 3.7 nights, on par with the state average of 3.7 nights; and
- Of the total domestic visitors to Whyalla 78% on average are intrastate travellers visiting friends and relatives with 65% of these intrastate visitors from Adelaide.

Based on information provided by Tourism SA and data prepared by Tourism Research Australia (TRA), there was an increase of 36% in international domestic visitors between 2013 and 2015 (+800 visitors).

5.3.3 Detailed Characteristics

International Visitors

A vast majority of international visitors typically have longer stays, with lower spends per night as shown in Table 5.2. This theoretically reflects low-yield travellers staying at lower-end accommodation types, e.g. camping, bush camping or travelling with self-contained residential vehicles.

Based on similar information, there was an increase of 5% in domestic overnight visitors between 2013 and 2015 (+4,000 visitors).

A summary of Whyalla visitation profile is provided at Table 5.8, based on information provided by Tourism SA, data prepared by TRA, and the results of consultation.

Tourism Research Australia further identified a total of 93,000 day-trippers in 2014. Average spend per day trip was estimated at $181.

36 Figures are reported on year ending September
37 TRA, Tourism in Local Government Areas 2013 and 2014 Whyalla
While international visitors account for 5% of overnight visitors in Port Lincoln, they account for approximately 2.2% in Whyalla (difference of 4,000 visitors). Noting an overall 4% of international visitors in the Eyre Peninsula, it is evident that it is the whole region that is yet to capture the attention of the international travel market.

**Domestic Visitors**

Based on data prepared by TRA, approximately 35-40% of domestic visitors travel to Whyalla to visit friends or relatives (31.5% in Port Lincoln), and 20% for holiday-purposes.

Approximately 35-40% of domestic visitors are in Whyalla for ‘business’ reasons (24% in Port Lincoln), and are likely to mainly comprise of contract workers.

Approximately 20% of domestic visitors are travelling on their own to Whyalla, and another 20% in a family group. Some 25% are travelling as a couple. It is likely that approximately 30% of visitors are groups or friends or relatives travelling together, which may reflect group business trips.

A majority of domestic visitor nights in Whyalla are spent with friends or relatives (41.5%) and hotels (21%). This is similar in Port Lincoln.

In the absence of data for Whyalla in respect to camping, it is worth noting that 13% of domestic visitor nights in Port Lincoln were spent in commercial camping/caravan park, and 25% in ‘other’ forms of accommodation. ‘Other’ forms of accommodation are likely to include rentals and guest houses.

The consultation process described in Section 6 identifies that an average of 82.5% of visitors who responded to the surveys undertaken in order to inform the Master Plan were camping or staying in caravans.

It is evident that the visitor profile in Whyalla is more business/family and less holiday oriented as compared to Port Lincoln.
**Accommodation Nights (Hotels, Motels, Serviced Apartments)**

A review of quarterly performances for hotels, motels and serviced apartments has identified key characteristics in relation to seasonality:

- Interestingly, the best performing quarter in Whyalla in terms of number of nights and occupancy rates tends to be the June ‘winter’ quarter; and
- In terms of takings however, the best performing quarter is the January to March period, where room rates are traditionally increased by operators.

Whyalla is the best performing location in the Eyre Peninsula in terms of room nights occupied, with approximately 37% of room nights occupied in Whyalla compared to 29% in Port Lincoln.

This is explained by the larger number of rooms in Whyalla (358 vs 991 in the Eyre Peninsula). This is further explained by the importance of short-term workers to Whyalla as compared to Port Lincoln.

With respect to expenditure, average takings are generally lower in Whyalla, with Port Lincoln trading some $35 to $42 higher per room night occupied.

Table 5.9 below provides a comparison between Whyalla and Port Lincoln tourist data, with numbers on the left for Whyalla, numbers on the right for Port Lincoln.

For those staying in commercial accommodation, the average spend per night in 2014 was $170 in Whyalla, as compared to $260 in Port Lincoln.

Table 5.10 compares the purpose of visit for domestic visitors. The sample size is too low to provide a similar assessment for international visitors. It is evident that Whyalla has a significantly higher proportion of business visitors and a lower proportion of holiday visitors. Capturing more of this holiday visitor market is a key opportunity for Whyalla.

**Table 5.9: Comparison of Visitation to Whyalla and Port Lincoln – Year Ending September 2015 unless otherwise stated Whyalla/Port Lincoln**

38 ABS Tourist Accommodation, SA 2014-15
5.3.4 Activity Profiles

Popular activities were identified through the survey undertaken with visitors (refer Section 6 for further information).

In general in Whyalla, the Marina/foreshore, the Point Lowly Lighthouse, the Maritime Museum were popular places to visit.

In respect to the Northern Coastline, fishing was identified as the primary activity, followed by, in order of popularity:

- Swimming;
- Boating/fishing;
- Hiking; and
- Crabbing.

Attractions in Whyalla

Table 5.11 identifies the annual number of admissions for each key visitor attraction in Whyalla.

It is noted that data for the Visitor Centre includes all interactions, including visitation of the Centre itself, but also any other type of enquiries.

Notwithstanding, it is evident that fewer visitors seek information from the Visitor Centre, before or during their trip, potentially due to new technologies.

Accommodation in the Study Area

As previously noted, the cottages at Point Lowly are managed by the Council as temporary accommodation, along with the adjoining camping ground.

The cottages were handed back to Council on 6 January 2015. The cottage can accommodate up to 29 persons. A review of the bookings at the cottages since then indicates an average of four monthly bookings, with groups of a size ranging between two and 30 persons. Approximately 40% of bookings were made by Whyalla-based people for various social or family gatherings. Peak booking is evident in June.

The average length of stay is of approximately 2.9 nights, with peaks of up to 12 nights for fishing groups (interstate visitors). Divers from Adelaide also seem to be aware of the opportunity to stay at the cottages, with a total of 86 visitors during the period (June and July).

Council income generated by the cottages in this period is estimated at an average of approximately $27,300 (using standard rates, noting different rates for residents, including surcharge).

As for the camping ground, a review of the visitor numbers between March 2015 and June 2016 identifies April/Easter as being the most popular period, with other long weekends also popular times for stays. August is seemingly the least preferred month, with the period from June to August generally less attended, along with December. The length of stay is longer over the warmer months, with a peak of 4.8 nights over the Australia Day week. The average length of stay is of approximately 2 nights.

Council income generated by the camping ground in this period is estimated at an average of approximately $25,000 (incl GST).

Source: City of Whyalla
6. **Consultation**

This Master Plan was supported by data collected via the following consultation processes:

**Stage 1 Consultation**
- Direct stakeholder consultation;
- Surveys including a preliminary survey at the Visitor Centre and Point Lowly; and
- Online visitor and resident surveys.

**Stage 2 Consultation**
- Direct stakeholder consultation;
- Community Open Day; and
- Online survey.

### 6.1 Stage 1 Consultation

#### 6.1.1 Direct Stakeholder Consultation

Key stakeholders were contacted while preparing this Master Plan, from the following sectors:
- Federal and State government department and agencies;
- Industry, including aquaculture operators;
- Hospitality - Accommodation;
- Leisure operators; and
- Key indigenous and community groups.

#### 6.1.2 Preliminary survey

A preliminary survey was conducted during the summer holiday period of January/February 2016. Hard copy survey forms were available at the Point Lowly camp grounds and at the Visitor Information Centre.

A total of 51 responses were received.

#### 6.1.3 Online visitor and resident surveys

A further, more detailed survey was conducted between 7 April and 18 May 2016. Two survey forms were available for either residents or visitors on Council’s website. Hard copy survey forms were also available for visitors at the Visitor Information Centre and at Point Lowly camp grounds.

A total of 98 responses were received (56 residents, 42 visitors).

### 6.1.4 Key Findings

- The Northern Coastline is a destination location for Whyalla residents, with a range of recreational pursuits undertaken;
- Residents would support and potentially utilise improved accommodation options, but of a form which maintains the natural character of area;
- A shop/cafe and improved cycling facilities were also supported by residents;
- Most visitors were from interstate, were couples aged 50 years or over, and were visiting the region as part of a longer journey;
- The majority of visitors stay 3 or more nights;
- Fishing and marine based activities were the post popular for visitors;
- The need for improvements to a common range of facilities were identified by various stakeholder groups; and
- The cuttlefish experience is seen as a key opportunity of interest to many respondents.
6.2 Stage 2 Consultation

An online survey and direct stakeholder consultation occurred from 29 July to 26 August 2016.

Those stakeholders who had been contacted during the first stage of consultation were emailed a Summary Report of the Master Plan and concept plans, and asked to provide feedback and/or complete the online survey.

An Open Day was organised on 11 August at the Westlands Shopping Centre in Whyalla, between 11am and 2pm. The consulting team and members of the Whyalla Council attended the session. All concept and precinct plans, and the master plan were displayed during the session and visitors were invited to comment and/or complete the survey.

A total of 27 responses submissions were received, including:
- 21 responses to the survey; and
- 6 separate submissions were made, including submissions from:
  » SATC;
  » DEWNR; and
  » The NRM Eyre Peninsula.

There was evident general support for the Master Plan, its vision and objectives, and concept/precinct plans.

It was understood and restated in several submissions that one of the overall objectives should be to increase visitation to the Whyalla Region as a whole, not just the Northern Coastline, and to create a single multifaceted destination.

It was further mentioned that the delivery of Master Plan will contribute to job creation and support employment in Whyalla, and should be urgently actioned.

Specific comments were made in relation to precinct and concept plans, which are further described in Appendix 1.

Comments were reviewed and integrated in this final version of the Master Plan.
7. Audit of Existing Facilities

An audit of existing tourism and recreation assets was conducted by landscape architects Oxigen. This audit involved a review of existing infrastructure and facilities and the identification of potential opportunities for upgrades or improvements. The audit examined campsites, hard facilities/landmarks (Lighthouse, Cottages, Boat ramp, toilets facilities), infrastructure, car parking areas and signage.

The detailed audit is provided at Appendix 2.

The audit onsets the present condition of existing facilities and structures. Other sections of this Master Plan describe upgrade/improvement works that are being undertaken or that are proposed/recommended in the area.

7.1 Key Infrastructure

Campsites
Camp sites in the Study Area include:
• Point Lowly camp ground;
• Bush camping along the coastline between Point Lowly and Fitzgerald Bay;
• Fitzgerald Bay RV camp area; and
• Fitzgerald Bay camp ground.

In Fitzgerald Bay, while it is understood that the area’s key quality is its remoteness and isolated landscapes, minor upgrades would assist to improve the general amenity visitors’ experience.

At Point Lowly, basic infrastructure such as picnic tables, bins, a toilet/shower block, and playground, which are all generally of moderate condition.

Facilities/Landmarks

Some more recent facilities such as the boat ramp is considered to be in good condition.

The following issues and constraints exist in relation to the Lighthouse and Cottages at Point Lowly:
• Internal access to the Lighthouse is restricted to the public, although it is promoted as an iconic landmark; and
• The Cottages are in relatively poor condition.
**Diving Site**

The cuttlefish dive site is subject to a number of locational and amenity issues including:

- Views to the adjacent Santos site and jetty undermine the otherwise pleasant aspect;
- A lack of basic infrastructure (no toilets, change room, etc);
- General access to the site including directional signage and car parking; and
- Information signage would be improved.

**Freycinet Trail**

A general upgrade of the Freycinet trail would also be of benefit, including start and finish infrastructure.

**Car Parking**

In general existing car parking areas meet the demand.

**Signage**

Signage around the Study Area is generally in moderate to poor condition, with old and/or inconsistent design, and could be upgraded or replaced.

**Vegetation**

It is noted that the poor condition of some of the infrastructure is due to lack of three cover/protection against winds. Some of the existing vegetation is also of poor quality.

The audit identified a number of assets where upgrades are considered important. Potential prioritisation of the upgrades has also been identified.

Initiatives considered to be of a high priority are listed below:

- Point Lowly Cottages: these are iconic buildings in the local area and represent an immediate opportunity for tourism related uses;
- Diving Site located at Black Point: such could be improved in terms of visibility, accessibility, amenity, to provide an enhanced diving experience;
- Signage, generally within the Study Area but more specifically in Point Lowly: directional, informational, interpretive signage could be replaced and further developed.
8. **Swot Analysis**

8.1 **Strengths**

Identified strengths of the Study Area are as follows:

- **Existing nodes:**
  - Point Lowly with basic infrastructure facilities, landmarks, attractions, connections; and
  - Fitzgerald Bay with limited facilities, yet remote and idyllic setting.

- **Natural assets:**
  - Landscapes;
  - Unique panoramic views;
  - Fauna and flora; and
  - Isolation and peaceful environment.

- **The area benefits from the significance of an internationally recognised cuttlefish breeding area. This already attracts visitor activity, particularly in winter, which is a traditionally less popular period. Potential growth in visitation could occur through marketing and infrastructure provision;**

- **The existence of niche markets who are aware of and visit the Whyalla region in order to undertake:**
  - Diving, including cuttlefish divers/researchers;
  - Four wheel driving; and
  - Fishing.

- **Existing infrastructure, which whilst is basic in most instances forms a platform for future development and improvement;**

- **Existing visitors are primarily self-driven, are therefore dynamic and able to move around the region (i.e. from Whyalla to study area);**

- **Other leisure facilities in Whyalla (VIC, HMAS, Steel Works, golf course) contribute to the general offering in the region;**

- **The area is recognised as a destination on wikicamps, together with other similar on and off-line information tools;**

- **Being located withing the Eyre Peninsula and the seafood/water based attractions for which the region is renowned;**

- **Aquaculture industry stakeholders seek to resume activities at Fitzgerald Bay; and**

- **Strong community support for the region and environmental assets, with perpetual work and suggestions to protect the coastline, such as:**
  - Protection of the shingle beach ridges;
  - Establishment of fences at entry points of tracks to prevent unwanted vehicles (4WD, bikes);
  - Definition of walking trails;
  - Construction of parking bays; and
  - Establishment of signage to prevent access, damage to vegetation, etc.

---

19 The Whyalla City Council, Eyre Peninsula NRM Board and Conservation Volunteers have provided assistance and funding to some of these improvement projects.
8.2 Weaknesses

Identified weaknesses to the development and growth of the Study Area are as follows:

- Low awareness of Whyalla region in general, and in particular the Study Area;
- Poor signage, both in terms of quantity and location, and quality/maintenance;
- Poor quality of roads;
- The lookout is not frequented (lack of awareness, slightly out of the way), and is not ‘visitor-ready’;
- Should visitors travel to Point Lowly, they usually do not go any further (lack of information, visibility, access);
- Lack of designated/recognised tourist drive/route;
- Lack of shade or shelters;
- Strong currents in some areas limiting safe swimming opportunities;
- Interface with Defence land and lack of connection to Port Augusta via coastal road;
- Visitor profile is typically low yield and fully self-contained, with quality of motor homes constantly improving. Contribution to the local economy is therefore not as significant as most other market segments;
- Visitors are attracted to affordability of the existing facilities - any increase in costs needs to be well justified and may take some time to be accepted;
- Access management with a lack of property boundary definition and signage with some RVers/visitors entering private property;
- Restricted public access to a number of areas;
- Impacts of beach driving;
- Distance to Whyalla and inconvenient access;
- Land use zoning, with most of the Lowly Peninsula zoned Industry, and only a narrow strip zoned Coastal Conservation. Few opportunities exist, to develop recreation but also to ensure the conservation and protection of the environment, if such zoning is retained. Should the area be envisaged for economic/tourism/environmental development, it may be necessary to rezone the land;
- Lack of separation distances to existing industries; and
- Existing shipwrecks do not have the potential to create diving opportunities.
8.3 Opportunities

Identified opportunities relevant to the Study Area are shown by Figure 8.1 and are discussed as follows:

- Existing landscapes are positive assets to attract visitation;
- Ecotourism destination, with environment-friendly activities, infrastructure, accommodation options;
- Nature-based land activities, which may require built infrastructure in adequate locations and designed with due consideration given to the environment and views (do not obstruct views, but maximise opportunities to enjoy them);
- Range of water-based activities, which may require some level of associated land infrastructure in key locations;
- Create a story and experience around the cuttlefish theme:
  - Improve the experience for divers and provide adequate infrastructure;
  - Enable views from land for those who do not want to get in the water and provide informational/interactive signage, including information about diving operators;
- Involving the community and particularly schools; and
- Provide adequate infrastructure for families, groups (tables, shelter etc) to improve the experience.
- Upgrade of existing infrastructure can be adapted to respond to visitors’ needs – refer to audit and visitors’ needs;
- Provide low key, discreet and coordinated informational and interpretive signage to increase public awareness and appreciation of the area;
- Improved road access for self-driven visitors, Whyalla residents and shack owners;
- Introduction of environment-friendly low impact activities which would be attractive to both residents and visitors;
- Relocation of lookout to maximise views and opportunities for visitors to stop (add signage, seating, shelter, car parking);
- Aboriginal and natural cultural heritage create opportunities for additional interest and experiences in the area;

Figure 8.1: Opportunities
• Opportunity for more leisure and recreation activities to occur along the coast and offshore, noting that some experiences are not presently offered in the region, such as a ‘swim with the dolphins’ trip;

• Investigate opportunities to leverage off the lighthouse and built heritage; and

• Destination-making with key precincts:
  » Point Lowly: built heritage to promote; existing infrastructure and marina facilities which may be further developed;
  » Fitzgerald Bay: unique views, secluded environment which should remain as such with only low-key facilities.
  » Cuttlefish Drive: for a diving experience. Although the main season will be winter, there is potential to promote the marine environment and create year round diving opportunities;
  » Fitzgerald Bay North: coastal living should remain predominant.

• Opportunities for cycling and walking trails, including mountain biking trails. Joint use with four wheel driving can be investigated in some areas.

• Previous Army activities and potential risk for unexploded ordnance;

• Threats that land and marine life, especially the cuttlefish, disappears or diminishes, due to:
  » Increased visitation, which can also increase litter and marine debris or other potential disturbance to marine life and cuttlefish;
  » Illegal fishing of cuttlefish;
  » Other known threats (acid sulphate soils, industrial pollution, habitat degradation, rise of sea temperature);
  » Other unknown future causes.

• The boom and bust nature of the cuttlefish numbers is also a risk and the area would benefit from ongoing monitoring and research;

• Hazards with climate change, potential flooding and rise of sea levels. Across the Spencer Gulf region, sea levels are projected to rise by 18cm by 2030 and 59cm by 2100. This is likely to have impacts on existing coastal habitats of mangroves, samphire wetlands and salt flats. It will also necessitate adaptation and mitigation requirements for existing and future infrastructure and natural and cultural assets;

• Illegal dumping/waste management and marine debris;

• Firewood collection;

• Informal camping may have a range of impacts on fauna and flora, and contribute to soil erosion (particularly 4WD);

• Residential development may also have environmental impacts on soil, vegetation etc;

• Environmental conditions such as weed infestation or erosion (accentuated by wind, vegetation loss) which is worsened by some activities - illegal driving on dunes;

• Informal 4Wdriving/motorbikes/mountain bikes in inadequate areas;

• Existing primary visitor market may be discouraged from visiting the Northern Coastline if costs are increased.

40 In relation to the potential future BHP pump station this is unlikely to have impacts on aquaculture should this activity resume at Fitzgerald Bay. In relation to the potential future Flinders Port facility, access to the coastal road leading to Stony Point will remain open to the public once the project becomes operational.

41 NRM Spencer Eyre Subregional Plan

8.4 Threats

Figure 8.2 identifies constraints and threats to the Study Area, which include:

• Potential future industrial developments in the area40;

• Illegal dumping/waste management and marine debris;
Figure 8.2: Constraints/Threats
Part B: Master Plan
9. **Master Plan**

### 9.1 Structure & Purpose

The purpose of the Master Plan is to provide the direction and framework for a tourism based economic and sustainable development strategy for the Northern Coastline of Whyalla. It seeks to identify and prioritise future projects and actions to be undertaken in the area by a range of stakeholders. The Master Plan will evolve and adapt over time, and is intended to initially respond to a 10 to 15 year horizon.

### 9.2 Master Plan Opportunities

The preceding investigations have identified different existing user types who the Northern Coastline in varying ways. It may act as:

- Living environment for shack owners;
- Recreation space for local residents;
- Holiday destination for local residents and visitors; and
- Stopover location for visitors.

The Master Plan has regard to the following considerations:

- Existing physical assets;
- Existing environmental assets;
- Existing visitor profile, needs and demands; and
- Potential target markets, noting different economic value associated with different market segments.

It is noted without further major investment, the nature of existing physical assets located within the Northern Coastline Study Area is unlikely to generate significant economic development and growth.

Opportunities exist to leverage off both the existing natural assets and primary physical assets of the Northern Coastline in order to increase the attractiveness of the area to existing markets, together with new market segments. Initial leveraging of these assets should aim to increase visitation and increase length of stay in the Whyalla region, thereby benefitting the existing tourism providers and the general economy of Whyalla.

The following themes and opportunities should be pursued, responding to the competitive advantages and natural assets of the Study Area:

- **Nature:**
  - Views;
  - Cycling/walking trails;
  - Natural heritage;
  - Shingle beach ridges; and
  - Fauna and flora, bird watching.

- **Adventure:**
  - Recreational fishing;
  - Four wheel driving;
  - Mountain biking; and
  - Hiking.

- **Aquatic:**
  - Cuttlefish - point of difference, uniqueness, international significance, which resonates in leisure/recreation, education, research, film industry etc;
  - Diving, snorkelling;
  - Wind surfing;
  - Boating/ off shore fishing;
  - Crabbing; and
  - Dolphin watching/swimming.

- **Camping,** with a range of users:
  - RVers for short or extended periods of time;
  - Bush campers;
  - Individuals or groups coming to enjoy the quietness or for a specific purpose (diving being one of them);
  - Locals from Whyalla.

Other forms of tourist accommodation may also be explored. Point Lowly has two cottages, a lighthouse and camping ground which are, or have the potential to be used for overnight accommodation. The main disadvantage of these assets is their size, in that individually, they are small and hence have limited revenue potential. In addition, they are not located close to a resident population. Therefore activities such as maintenance and cleaning are not easily undertaken. This is likely to result in higher operating costs.
Grouping all these assets may result in the economies of scale required to attract private sector management and investment. Collectively, they could enable an on-site caretaker/manager to operate the facilities. The flow on effect from an on-site presence is the possibility of opening a café and small shop, even if only in peak season.

Current occupancy and revenue potential of the cottages is low. Hence, further development of the sites will require proactive and dynamic management. To encourage private sector investment in Point Lowly, a call for Expressions of Interest to develop, upgrade and manage the facilities may be the best option to identify the nature and extent of private sector interest. This approach will allow the private sector to investigate and potentially undertake viable business ventures tailored to satisfy market demand and expectations. This is preferable to a more definitive call for tenders or Expressions of Interest, which does not allow the private sector to be innovative.

Through targeted immediate investments, it is possible that the Northern Coastline will become a more attractive location, responding to market sectors which may seek to spend both more time and money in the area, therefore supporting the development of additional, facilities, and potentially a new range of accommodation opportunities in the longer term.

9.3 Vision

The following vision for the Northern Coastline is proposed, having regard to the opportunities identified.

‘The Northern Coastline will be recognised as a year round destination, valued for its quality environment and recreation and lifestyle experiences. A diverse range of activities will be accommodated that balances the need to maintain the value of the existing natural, cultural and environmental assets whilst adding value to the local economy’.

The Master Plan seeks to create opportunities for residents and visitors alike to enjoy a diverse range of recreation and tourism experiences based around the unique land and marine assets of the Northern Coastline.

The Northern Coastline should integrate with the wider Whyalla and Eyre Peninsula tourism offer, physically (roads, connections, signage) but also strategically, as part of marketing and promotion initiatives.

The Master Plan seeks to ensure that the Northern Coastline becomes an integral part of the “Whyalla Destination”, which does not compete with Whyalla but complements its assets and creates additional opportunities and experiences.

9.4 Objectives

For the success of the Master Plan it will be particularly important to:

- Increase and lengthen visitation to the Northern Coastline;
- Ensure the infrastructure and experience satisfies the needs and expectations of visitors;
- Ensure sustainable development and growth; and
- Build a complete destination.

The following objectives are designed to facilitate the attainment of the vision for the Northern Coastline. It provides specific expectations in respect to what will be achieved. Associated prioritisation and timeframes are discussed further in the Implementation Plan.

9.4.1 Objective 1: Increase and Lengthen Visitation to the Northern Coastline

- Respond to new market opportunities;
- Provide a range of different activities;
- Transform day trips into overnight trips;
9.4.2 Objective 2: Ensure the Infrastructure and Experience Satisfies the Needs and Expectations of Visitors and Residents

- Create unique experiences and diversify activities;
- Upgrade existing infrastructure and facilities;
- Facilitate a variety of accommodation and experiences as visitor demand increases, markets diversify and expectations changes;
- Ensure marketing/promotion material highlights the tourism offering and calendar of the region.

9.4.3 Objective 3: Ensure Year-Round Sustainable Development and Growth

- Encourage repeat visitation;
- Build a calendar of events which focus on the region, such as an outdoor endurance event e.g. kayaking, swimming, running and cycling, and fauna/cuttlefish;
- Ensure activities are appropriately located in relation to environmental assets and are environmentally sustainable;
- Facilitate development which is compatible with the natural and cultural attributes of the area;
- Ensure the Whyalla community continues to enhance and support the coastline as a destination;
- Address existing conflicts (visitor/resident, interface with industry, army, area user/environment).

9.4.4 Objective 4: Build a Complete Destination and Increase Awareness

- Build on the strengths and competitive advantages in the region;
- Promote the Northern Coastline and Whyalla as a single destination;
- Seek increased the number of tours to the region and expand the focus of the tours such as cycling, kayaking, fishing, cuttlefish, coastal geology, birdwatching, wildlife and vegetation;
- Consider a naming/branding strategy for the Northern Coastline and market accordingly.
9.5 Precincts

Four precincts have been identified that are distinct from one another and can support different activities. These precincts can be developed in different yet complementing ways.

9.5.1 Cuttlefish Coast (1)

Diving Infrastructure

The diving and interpretive experience in the area should be improved in order to attract additional visitors to the area.

The diving experience can be enhanced by upgrading infrastructure, noting that a number of initiatives are already being undertaken (road upgrade, funding obtained for improvements to the diving infrastructure).

A concept plan was prepared by the Whyalla Council in 2016 for the upgrade of the existing diving site, and the project has received funding through the Regional Jobs Accelerator Fund. This is to include a new walkway, boardwalk, landscaping, shelter, tables and seating, and in the long run eco-toilets. The concept plan is shown by Figure 9.1.

While this will enable to leverage from the existing site, it is important to remain aware of potential future industrial developments at Stony Point. Should these occur, it will be desirable to relocate the existing diving infrastructure further to the west, in order to improve the general diving experience and minimise any nuisance arising from industrial activity.

</tr>
<tr>
<td></td>
<td>1.1.5 Investigate the opportunity to design an underwater dive trail showcasing the marine history and cultural heritage of Whyalla.</td>
</tr>
</tbody>
</table>

The exact location of the relocated dive site will be dependent on further investigations and consultation with relevant stakeholders, however one suggested location is shown on Figure 9.2. Investigations will need to have regard to a range of factors including the configuration of reef, presence of sand and the exact congregation areas of cuttlefish.

While the suggested potential location for this other dive site may be within the area where shore-based recreational line fishing is allowed, the interaction between divers and fishermen can be managed through the design of diving infrastructure (e.g. pontoon).

If this occurs, the existing dive site should still be retained, however with no additional upgrades but as currently established, as it is likely to remain used by more experienced divers. As such, marketing of the Cuttlefish Coast could promote different sites for different levels of diving skills, with the proposed new site being appropriate for beginners and intermediate skills, and the existing site identified for advanced divers.
Black Point

Further west, adjacent Black Point, fishing is authorised within the Sanctuary Zone. Opportunities exist to enhance this popular snapper and whiting fishing area and to provide additional infrastructure to support a day trip. This could include seating and tables, barbecue facilities and a look out.

Figure 9.2 provides an overview of the Cuttlefish Coast precinct.

Camping opportunities could be explored on Cuttlefish Coast in order to create an integrated experience.

This area could also be a central point for the future organisation of events, such as a Cuttlefish Festival.

Concept Plan
Cuttlefish Coast Dive Site

Figure 9.1: Stony Point infrastructure upgrade (funding was separately secured by Council)
Figure 9.2: Cuttlefish Coast
9.5.2 Point Lowly (2)

Point Lowly Road

The termination of Point Lowly Road does not provide a sense of arrival, which should be enhanced through the establishment of basic additional infrastructure such as seating, shelter, signage, car parking, and landscaping in order to represent and celebrate a destination location.

Accommodation

While it is a landmark building, the lighthouse is not internally accessible to the public. A business case which identifies the potential to open the lighthouse to the public should be undertaken. In addition, consideration of using the lighthouse for boutique accommodation should be explored.

The cottages are an important asset and opportunity to attract for private sector investment. They could, for example:

• Operate as independent units but with a shared upgraded kitchen;
• Function as fully self-contained units;
• Operate as bed-and-breakfast/catered units;
• Be used in whole or part to support local arts/crafts/cafe and interpretation

It is noted that DEWNR State Heritage Unit has advised that they would be supportive of any adaptive re-use (in accord with the principles of the Burra Charter) of the lighthouse keepers cottages.

The land located north of Point Lowly Road presently contains the Point Lowly camp ground and associated facilities (playground, toilets, showers).

A large section of the land is also presently undeveloped. While portion of this land could be revegetated, there is potential to expand the existing camping ground and potentially diversify accommodation options (camp sites, cabins).

</tbody>
</table>
Recreation precinct

The open area adjacent to the lighthouse should remain relatively natural. However, minor upgrades (seating, shelter, signage) could be established.

A transition between the ‘built up’ area and a more natural/revegetation area in the form of a ‘nature play’ environment could be established. This could comprise low maintenance play elements made of natural and sustainable material. In the longer term, should the nature-play environment prove popular, this could be further expanded.

Management of the environment

It will be important to retain the area that is presently subject to revegetation management and also identify further opportunities for revegetation.

Formalising and managing public access to the sandy beaches (the only occurrences in the Study Area) should be further investigated.

Signage

At the termination of Point Lowly Road, improved signage is recommended to celebrate and interpret the area, its history and heritage, but also provide direction to other precincts and range of activities within the Northern Coastline, including the start of the Freycinet Trail.

DEWNR State Heritage Unit has confirmed that they would support “the installation of improved signage to celebrate and interpret the area, its history and heritage”.

Figure 9.3 provides an overview of the Point Lowly precinct.

- Proposed possible expansion of existing camp areas - camping and cabins.
- Approximate location of Aboriginal Heritage reported site.
9.5.3 Fitzgerald Bay (3)

Accommodation

The existing camp site could be formalised and enhanced with upgraded facilities. It was identified during consultation that additional facilities, such as showers, barbecue facilities, firewood, access to drinking water would be of benefit. Dump points have also been requested, at the RV site. Fees to access the facilities or some of the services could be considered.

Basic camping options, with more limited services/facilities, should be retained and a separate area potentially formulated to the north of the existing shacks.

In the longer term, it could be possible to establish ‘glamping’ opportunities, such as eco-lodges, in elevated and secluded areas of Fitzgerald Bay.

Any proposed works will be subject to further investigations, in relation to potential visitor impact and management, vegetation clearance etc. Approvals from relevant stateholders will be sought.

Future works will also be subject to approvals from the State Heritage Unit in relation to the Stranded Shingle Ridge.

Residential Use

There may be an opportunity to continue the establishment of dwellings within the existing boundaries of the Coastal Settlement Zone. This will be subject to further investigations and/or approvals, given the land is owned by the Crown.

Road/Trail infrastructure

Fitzgerald Bay is the termination of the Freycinet Trail. Basic facilities (seating, drinking water) potentially connecting into the formalised camping area would enhance the visitor experience.

To the east of Gulf View Drive are existing shacks and the shingle beach ridges. It is known that informal four wheel driving and mountain biking occur in this area. This will need to be controlled. Signage and potentially fencing could be established to manage and prevent this activity. Designated mountain biking areas could be explored, while other alternative areas could be investigated for four wheel driving.

There generally are coastal hazards in the area which may increase sea levels in the future. This will require further investigations and approvals.

Management of the Environment

In relation to the Stranded Shingle Ridge, an application for their inclusion in the SA Heritage Register is being considered by the Heritage Unit of DEWNR. Should this application be successful, additional interpretive signage should be established.

The SA Heritage Council provisionally entered the Ridge on the Register on 24 August 2016. This will be confirmed after a 3 month public consultation process. The boundaries of the Heritage Place are shown on Figure 9.3.

Figure 9.4 provides an overview of the Fitzgerald Bay precinct.

DEWNR has confirmed their support for “interpretive signage at Fitzgerald Bay, highlighting the geological significance of the site”.

Minister for Sustainability, Environment and Conservation
9.5.4 Douglas Point

Douglas Point is a relatively less accessible area of the Northern Coastline which is out of the way of the ‘things to see and do’. A number of shacks exist here including dwellings occupied by permanent residents.

The focus of this area should ensure the amenity of the area for residential purposes is maintained.

Notwithstanding, existing view points and camp sites should be upgraded with basic facilities.

The interface with Defence land and activities requires ongoing management and communication to minimise the impacts on residents.

9.6 Overall Master Plan

Figure 9.5 represents the Master Plan for the whole Study Area. The Plan is also reproduced as Appendix 2. It demonstrates the interrelationship between the precincts and is designed to ensure a co-ordinated approach to development within the area.
Aquaculture development

It was confirmed during consultation that private operators will in the future seek to resume aquaculture activities at Fitzgerald Bay, in the Aquaculture Zone. Land has been identified north of Point Lowly for land-based infrastructure and the creation of a separate wharf/ramp. Land ownership will need to be secured in negotiation with DEWNR, who currently owns the land.

When aquaculture activities recommence, it would be desirable to encourage new value adding activities which have synergies with the ‘seafood’ theme and eventually form part of the Seafood Frontier trail.

Potential conflict exists between the aquaculture industry and a proposal by BHP for a desalination plant and a pump station. Resolution between stakeholders will need to occur in due course and ascertain the compatibility of these developments.

### Accommodation

A hierarchy of camp sites and potential future forms of accommodation should be established. A variety of accommodation options is desired to respond to the needs of existing/future markets.

</tbody>
</table>
Recreation

Four wheel driving already occurs informally in the Study Area, and formal opportunities could be further explored for the activity to occur in a more managed and controlled manner which minimises impacts on the environment, residents and visitors.

Terrain of interest to four wheel drivers exists between Point Lowly and Fitzgerald Bay, on the western side of the existing coastal road. This is an area where noise and dust will have limited impacts for other users of the Study Area.

However, investigations will need to be completed to determine if and where the development of four wheel driving tracks may be appropriate, noting that such is likely to require land owner, development, native vegetation clearance approvals.

Opportunity may also exist for the establishment of dedicated and promoted mountain-biking areas. The primary market for mountain biking typically consists of local residents who may travel up to 40 kilometres from their place of residence. This may also include families and leisure cyclists.

Over time, dedicated tracks may attract more specialised bikers and/or groups from other localities.

Year Round Activation

Whyalla benefits from a rare winter asset in the form of the cuttlefish aggregation. As previously discussed, further infrastructure can be established to leverage from and support the cuttlefish theme to increase visitation numbers. Events such as a Cuttlefish Festival may also be considered.

Connections

It will further be necessary to ensure connections between all precincts in order to create a complete destination that is easy to navigate.

The existing road network is such that it can be upgraded over time to create loops, suitable for scenic driving or cycling and walking. This will create a range of opportunities, itineraries and distances for various levels and skills.

This could include a coastal beach trail at Point Lowly, which is to be further investigated.

A cycling connection to Whyalla could be explored in the medium to long term.

The Freycinet trail should be upgraded, with increased amenities and signage. Schools could potentially be involved in the redesign of signs. The existing lookout should also be upgraded and become part of the trail.

<table>

</tr>
</tbody>
</table>
Signage

In order to enhance the area as a destination that is easy to navigate a signage strategy will be required in the Study Area and beyond. New or upgraded signage will therefore be necessary at the following locations, in order to capture the attention of passing traffic:

- Lincoln Highway
  » Turn off to Study Area (Point Lowly Road);
  » Lincoln Highway, turn off to Arthur Glennie Road;
  » Section between Cowell and Whyalla;

- Eyre Highway
  » Section between Port Augusta and turn off to Iron Knob;
  » Intersection of the Eyre Highway (turnoff to Iron Knob from Port Augusta); and

- Tod Highway, intersection at Lock (potential to be further investigated).

The provision of promotional signage in Port Lincoln and Port Augusta could also be investigated.

<td>5.7.8 Promotion at other Visitor Information Centres</td>
</tr>
</tbody>
</table>
10. CONCLUSIONS & IMPLEMENTATION

This Master Plan seeks to provide directions and a framework for a tourism based economic and sustainable development strategy for the Northern Coastline of Whyalla.

It contains a vision and objectives, and a number of initiatives to achieve these objectives. It has further identified precincts which support different activities.

The Northern Coastline’s primary attributes revolve around its natural beauty and sense of isolation. It is important that any increase in visitation, either overnight or day trippers, does not destroy the natural attraction of the area. This will require the establishment of infrastructure which does not affect the environment but complements it.

The Northern Coastline is “out of the way” and principally visited by “grey nomads” and local residents who visit the area for nature based activities. A small number of residents are also shack owners, who appear to enjoy the isolation and low intensity visitation.

There is also clear potential to increase visitation from these existing markets. There is also an opportunity to diversify target markets and attract a range of new users to the area, throughout the year.

It is unlikely that a substantial increase in visitation will occur in the short term. Rather visitation can be built up over time. Consequently, in the short term the focus should be on capitalising on the existing attributes of the region and increasing awareness among residents and visitors. This will include relatively low cost capital works which improve amenities and increase access.

Key recommended actions have been identified in Chapter 9. A detailed Implementation Plan is provided at Appendix C, with some 75 initiatives, precinct by precinct.

Potential prioritisation has been identified. Cost estimates have been prepared, noting that funding opportunities may exist to support the implementation of some of the proposed initiatives.

The Master Plan is framed to enable the Whyalla City Council, primarily, and RDAWEP to take leadership in the facilitation of the future development of the Northern Coastline, and to allocate time and resources for its implementation over time.

The Master Plan should be used as a ‘live’ document which should be reviewed in 5 years to ensure it remains up-to-date.

It is essential that the endorsement and implementation of the recommended actions occur following consultation with key stakeholders and land owners including the traditional owners of the land.

As such, the implementation of the master plan should have regard to the below requirements:

• Further investigation is required surrounding native title for Crown Lands
• Any land not under dedication to Council will require rededication and support of the Minister if required for use with regard to the Master Plan.
• DEWNR’s Crown Lands Unit will further review and provide comment on all crown land parcels in the plan
• The proposed works are dependent on further investigations and approvals (which may include landowner permission, native title negotiation, coastal hazard investigations, development approvals, marine park approvals, native vegetation and biodiversity assessments, etc).
• All proposed works are based on preliminary indicative designs that are all subject to future detailed design

The actions recommended by the Master Plan may be complemented by other larger scale capital developments, some of which may be located in Whyalla, which will complement and integrate with the attributes of the Northern Coastline.
APPENDIX 1: CONSULTATION SUMMARY
CONSULTATION

Previous Consultation undertaken and results

As noted in the project brief, previous consultation has identified a range of improvements and activities that could occur in the area:

- Several upgraded coastal tracks (including 6km to Fitzgerald bay, reduce several steep inclines and seal);
- More walking trails, integrating different sections of the Point Lowly Peninsula;
- Improvements to existing and the provision of more camping sites;
- Provision of small fishing jetties;
- Lookouts at key locations;
- A cycle/walking trail connecting Whyalla to the northern sections of Point Lowly;
- An upgraded road network, ideally including the sealing of key roads (to Point Douglas);
- Satellite facilities for the proposed Cuttlefish Interpretive Centre;
- Options to encourage the development of additional aquaculture enterprises;
- Caravan park with supporting infrastructure; and
- Coastal living subdivision at False Bay and/or Southern Fitzgerald Bay.

Master Plan Consultation Process & Results – Stage 1

This Master Plan is further supported by data collected via the following consultation processes:

- Direct stakeholder consultation;
- Preliminary survey at the Visitor Centre and Point Lowly;
- Online visitor and resident surveys.

Due to the sample size the results from the surveys are potentially statistically biased. Therefore the results should be used with caution.

Direct Stakeholder Consultation

Key stakeholders were contacted while preparing this Master Plan, from the following sectors:

- Federal and State government department and agencies;
- Industry, including aquaculture operators;
- Hospitality – Accommodation;
- Leisure operators; and
- Key indigenous and community groups.

Visitor and Resident Surveys

A preliminary survey was conducted during the summer holiday period of January/February 2016. Hard copy survey forms were available at the Point Lowly camp grounds and at the Visitor Information Centre.

A total of 51 responses were received.

A further, more detailed survey was conducted between 7 April and 18 May 2016. Two survey forms were available for either residents or visitors on Council’s website. Hard copy survey forms were also available for visitors at the Visitor Information Centre and at Point Lowly camp grounds.

A total of 98 responses were received (56 residents, 42 visitors).

Four survey responses were submitted by international visitors (4% of visitor responses).
**Key Findings – Residents**

**A. Activities**

Those activities that are typically undertaken at least once a month are 4WD and shore/jetty fishing. Boating/fishing is also an activity that is performed once a week by a quarter of respondents.

While most activities are performed less than once a month, a majority of respondents do participate in hiking, cycling, swimming, diving, crabbing.

The Northern Coastline is clearly a destination location for diving, snorkelling, shore/jetty fishing, boating/fishing, crabbing, 4WD and swimming.

Cycling and hiking are two activities that are undertaken less frequently on the Northern Coastline as compared to elsewhere in Whyalla.

Camping was also a common activity.

**B. Cuttlefish Experience**

It is noted that nearly 75% of local respondents have never been cuttlefish diving.

It should be noted that all suggested improvements to the cuttlefish experience, as outlined by the survey were positively received.

A viewing platform and seating/picnic tables received the greatest level of support. While the cuttlefish does not represent – at present – a key interest or a main reason to travel out of Whyalla, it seems to be considered as an opportunity/reason for a day outing for local people, which can be embellished with a picnic, a walk, or other activity in an enjoyable location out of town.

Information and awareness also seems to be a key aspect to improve the cuttlefish experience for locals.

**C. Quality of Infrastructure**

The quality of infrastructure on the Northern Coastline was generally assessed as being average to poor, with walking/cycling trails the item with the most “poor” responses.

**D. Supply Gaps and Needs**

A majority of respondents (78%) agreed with the statement that more accommodation options should be provided on the Northern Coastline, predominantly in the form of a camping ground (44%) or caravan park (26%).

With particular respect to camping, a majority of suggestions for additional facilities related to the provision of toilets and showers (in some cases, hot showers). Other suggestions related to:

- Waste management – bins;
- Barbecue, particularly in Point Lowly;
- Accessibility, with bitumen roads for an easier access for non-4WD vehicles. It should be noted that accessibility and the quality of roads was an issue for some respondents who are not currently regular visitors of the Northern Coastline;
- Directional/traffic signage and information boards (camping areas, fauna, flora, history of area etc); and
- Boating/fishing facilities related facilities – jetty, pontoons, fish cleaning facilities, as well as an upgrade to the boat ramp.

The general sentiment is that the area should be left as natural as can be, with only minor improvements to the camping facilities.

It should be noted that nearly 40% of respondents do not regularly visit the area because of the lack of infrastructure. Nearly 60% of respondents strongly or generally agreed with the proposition of a shop/café in the Study Area.

More than half of the respondents (53%) strongly agreed that more cycling trails should be established, within the Study Area.
A larger proportion of respondents (58%) thought that a cycling trail should be established connecting Whyalla and the Study Area. Respondents generally agreed with the proposition for more events and festivals.

Open suggestions

The key matters identified in the open feedback question are listed below and confirm previous findings:

- Upgrades to roads;
- Visibility and promotion;
- Need for toilets;
- Running and/or drinking water;
- Café/shop;
- Look-out panoramic locations;
- Walking and cycling/bushwalking trails within the Study Area and connecting back to Whyalla; and
- Upgrade to boat ramp.

Key Findings – Visitors – Preliminary Survey

A. Profile of Visitor Respondents

A majority of respondents (70%) were from interstate (all states represented), travelling in groups of 2 persons, predominantly above 50/60 years of age.

The majority of respondents were on self-organised holidays, with Whyalla only a stop over during a longer trip for 75% of visitors.

Approximately 20% were on their way to Port Lincoln. Approximately 90% were camping/caravanning during their stay.

B. Activities

Fishing was identified as the most popular activity for the respondents. For those who had not been to the Northern Coastline, “lack of time” was the key reason, followed by lack of information. Most respondents knew about Whyalla through word of mouth (approximately 20%).

C. Cuttlefish Experience

Some respondents suggested that more information be provided about the cuttlefish, including at a national level. Some also suggested that they would have liked to have experienced the cuttlefish.

D. Quality of Infrastructure

Most of the existing infrastructure was considered to be in “good” condition. Signage however was described as being an issue (both directional and informational), in the Study Area and also on the main highway.

Some respondents also mentioned the quality of roads along the coast. It was seen as a reason for visitors not to visit the Study Area (damage to vehicles).

E. Supply Gaps and Needs

Approximately 30% of respondents did not think it was necessary to establish a food/beverage outlet, noting that nearly half of total respondents did not respond to this question.

Signage, particularly on main roads, but also in the Study Area and in the Whyalla centre, was identified as requiring significant improvement.

In relation to camping, most of the suggestions were as follows:

- Water, showers, toilets;
- Shade (shelters or trees);
- Barbecue area, particularly at Point Lowly camp ground; and
- Rubbish bins (in some cases recycling bins).
Key Findings – Visitors – Online Survey

A. Profile of visitor respondents

A majority of visitors were from interstate (WA, QLD, NSW, VIC, and Tasmania). Nearly 70% of respondents were travelling in a group or family of 2 persons, with approximately 25% travelling as a group or family of 3 or 4.

A large proportion of respondents were between 60 and 69 years of age.

75% of respondents were in Whyalla/Northern Coastline as part of a longer trip to multiple destinations. Approximately 12.5% were on a holiday in Whyalla only, and only 5% were visiting friends and relatives.

The length of stay varied, with a majority of respondents staying 3 nights or more.

60% respondents travelled to Whyalla with a mobile home or caravan, and 40% by private car. As expected, a majority of respondents were staying/stayed on a camping ground (72.5%).

Over 80% thought the quality of the accommodation was good (52.5%) or excellent (30%).

None of the respondents were travelling with an organised tour group.

Word of mouth was the principal source of awareness/information for visitors, followed by Internet searches (more particularly wiki camps) or camp guide books.

B. Activities

The two most popular activities were visiting the foreshore/marina, and the Point Lowly lighthouse, which respectively approximately 51% of respondents visited.

The Maritime Museum, Fitzgerald Bay and the Visitor Information Centre received similar levels of responses (between 30 and 35%).

The most popular activities on the Northern Coastline, in order of popularity, were:

- Shore/jetty fishing (83%);
- Swimming (64%);
- Boating/fishing (60%);
- Hiking (58%); and
- Crabbing (50%).

Other activities (diving, snorkelling, cuttlefish diving, cycling, 4WD) were selected by less than 50% of respondents.

C. Cuttlefish Experience

Only a minority of respondents had experienced the cuttlefish.

Therefore, whilst the majority of respondents to this question considered a viewing platform to be desirable to enhance the cuttlefish experience, this reflects the opinion of a non-diving market, which would not require the use of a platform. Potential therefore exists to respond to the non-diving market and to capture the interest of a broader market segment.

The survey identified that little information existed about the cuttlefish.

A glass bottom boat was also suggested, to assist in viewing the cuttlefish.

Overall, it seems that “viewing” opportunities would potentially reach a wider market than solely the diving market.

The fact that other facilities were not by any of the respondents reflects a non-diving market. Targeted consultation was required to identify requirements to improve the cuttlefish diving experience (refer 6.1).

D. Quality of Infrastructure

Overall the quality of existing infrastructure was assessed predominantly as ‘good’ (average of 54%). Notwithstanding, all infrastructure received significantly more ‘average’ responses than ‘excellent’ responses.
Roads ranked as the ‘best quality’ infrastructure, with 74% of satisfied responses (64% good, 10% excellent).

Rest stations and walking/cycling trails were two elements with the lowest levels of satisfaction.

E. Supply Gaps and Needs

Approximately 55% of respondents highlighted the need for additional accommodation infrastructure on the Northern Coastline, predominantly in the form of camping grounds, noting 10% of respondents suggested a bed and breakfast option.

A majority of respondents also agreed with the need for a shop/café to be provided on the Northern Coastline, with nearly a third “strongly” agreeing with this concept.

Similarly, a majority of respondents identified the need for more cycling trails, noting that cycling was an activity for only 10% of respondents. A similar proportion of respondents were “unsure” about the need to create a cycling trail between Whyalla and the Study Area.

No respondent disagreed with the proposition for more events and festivals to be organised on the Northern Coastline, however 40% were “not sure”.

In summary, all suggestions for additional infrastructure/facilities received general support.

Open suggestions

The open question at the end of the survey highlighted a need for more and clearer signage (both information and directional).

Respondents seemed to be generally open to paying a small fee to use low level facilities (showers and/or toilets). More structured facilities (e.g. playground) were considered unnecessary, but food/café facility was suggested a few times (seasonal/temporary in some instances).

Summary Stage 1 - Key Findings

- The Northern Coastline is a destination location for Whyalla residents, with a range of recreational pursuits undertaken;
- Residents would support and potentially utilise improved accommodation options, but of a form which maintains the natural character of area;
- A shop/cafe and improved cycling facilities were also supported by residents;
- Most visitors were from interstate, were couples aged 50 years or over, and were visiting the region as part of a longer journey;
- The majority of visitors stay 3 or more nights;
- Fishing and marine based activities were the post popular for visitors;
- The need for improvements to a common range of facilities were identified by various stakeholder groups; and
- The cuttlefish experience is seen as a key opportunity of interest to many respondents.

Master Plan Consultation Process & Results – Stage 2

The final stage of the Master Plan was further supported by data collected via:

- Direct stakeholder consultation;
- Online survey; and
- Community Open Day.
Process

An online survey and direct stakeholder consultation occurred from 29 July to 26 August 2016.

Those stakeholders who had been contacted during the first stage of consultation were emailed a Summary Report of the Master Plan and concept plans, and asked to provide feedback and/or complete the online survey.

Residents of the Northern Coastline were mailed the Summary Report and plans, and invited to complete the online survey.

An Open Day was organised on 11 August at the Westlands Shopping Centre in Whyalla, between 11am and 2pm. The consulting team and members of the Whyalla Council attended the session. All concept and precinct plans, and the master plan were displayed during the session and visitors were invited to comment and/or complete the survey.

A total of 27 responses submissions were received, including:

- 21 responses to the survey; and
- 6 separate submissions were made, including submissions from:
  - The South Australian Tourism Commission;
  - The Department of Water, Environment and Natural Resources; and
  - The NRM Eyre Peninsula.

Key findings and required changes

In relation to respondents to the survey, Table 1 below presents the overall levels of support for each question.

</tbody>
</table>

There was evident general support for the Master Plan, its vision and objectives, and concept/precinct plans.

A number of submissions highlighted that it would be beneficial to action the Plan as early as possible within upcoming years budgets. The SA Tourism Commission particularly emphasised that the highest priorities should be centred on the Cuttlefish Experience and associated infrastructure and amenities to cater for visitors. This has been reflected in the Implementation Plan.

It was understood and restated in several submissions that one of the overall objectives should be to increase visitation to the Whyalla Region as a whole, not just the Northern Coastline, and to create a single multifaceted destination.
It was further mentioned that the delivery of Master Plan will contribute to job creation and support employment in Whyalla, and should be urgently actioned.

Strong interest was expressed in relation to the sustainable nature of the Study Area. One submission suggested that the protection and enhancement of cultural and environmental assets should be added to the objectives. This was already included as a dot point to Objective 3.

Clearly the question that received the least support (although 65% respondents were in support) was in relation to Douglas Point. Respondents generally perceived that there was not sufficient information to provide accurate feedback and that more details should be provided. The residential focus that was initially given to the Douglas Point precinct was revised to include camping/leisure aspects.

With particular respect to precinct plans, a number of comments were made:

A. Cuttlefish Coast plans

One submission suggested that opportunities could be explored to turn diving into a year round activity within the Upper Spencer Gulf, while another respondent supported the creation of new events on Cuttlefish Coast, such as music festivals, windsurfing competitions.

A number of submissions supported future activities for non-divers to experience the cuttlefish, such as viewing platforms or a glass bottom boat.

One submission stated that fishing should “be discouraged in this area, to protect the cuttlefish”, however the fishing zone was a result of negotiations between SA Government and the local community during the creation of the Marine Park.

A submission suggested that a “vegetated corridor along the Santos boundary” be established to “(somewhat) screen the industrial site”. Noting the relocation of the diving site further to the west and the shift of the access road, this is not considered necessary.

Further to a number of submissions, the Concept Plan was extended to include the whole of False Bay.

B. Point Lowly

A number of comments were made in relation to the maintenance of roads, to vegetation clearing along roads, car parking issue in summer months.

Some submissions encourage the rezoning of the industrial land that has not been developed to recreation/environment/leisure purposes. This is consistent with other comments requesting the expansion of the Study Area of this Master Plan to include the hinterland. These suggestions have merit, and a rezoning process was included in the Implementation Plan.

While one submission had doubts about further residential expansion, it was generally agreed that Point Lowly was a place of “balance” for both travellers and residents alike.

One submission had concerns about the way the proposed path would connect around the lighthouse to the Freycinet Trail, with concerns being in relation to potential impacts on the environment and shack owners privacy. A detailed study will need to be prepared.

C. Fitzgerald Bay

It was reemphasised that off road four wheel driving should be prevented from occurring, which was consistent with the proposed plans.

There were clear concerns in relation to waste management and maintenance of existing and future facilities.

D. Douglas Point

It was generally submitted that further details should be provided in relation to Douglas Point. The residential focus that was initially given to the Douglas Point precinct was revised to include camping/leisure aspects. Opportunities exist to enhance this precinct and upgrade existing camp sites and signage.
A new precinct plan was prepared for Douglas Point in response to these submissions.

Further, more details were requested as to “how the plan intends to manage the interface between defence and shack owners”. Discussions with Defence suggested that more communication between Defence and Council and/or shack owners could occur, particularly in relation to upcoming training events in the Cultana Training Area. Additional signage should also be established to inform residents and visitors alike. It was suggested during consultation that only minimal activity occurred close to the boundary due to the terrain in the vicinity of the Northern Coastline. Further monitoring of nuisances such as dust and noise should therefore occur and discussed between local residents, the Whyalla Council and Defence.

E. Master Plan

It will be important to ensure access to key spots to all vehicles including non 4WD vehicles that currently have more difficulties to travel around the Study Area.

Two submissions were against four-wheel driving in the region in general. However informal 4WD already occurs in the Study Area and participates to the degradation of environmentally fragile areas that should be protected. The provision of a formal 4WD zone, distant from residents and protected areas, will help to ensure that informal four-wheel driving does not occur.

Number of submissions highlighted that the opening of the coastal road would be beneficial to the region. Council, RDA and the community are encouraged to continue discussions with Defence.

Further to a number of submissions, the Master Plan was extended to include the whole of False Bay and Douglas Point.

F. Other comments

While comments have been incorporated in the Master Plan, it is important to note a series of matters that were raised by feedback received by various units within DEWNR, including NREP, Heritage Branch, Coastal Management Branch, Crown Lands Branch and Marine Parks and Nature Based Tourism:

The draft Masterplan aligns with a number of State Governments and DEWNR initiatives, including:

- State Economic Priority 5 - South Australia - a growing destination choice for international and domestic traveller
- DEWNR Corporate Plan Goal 2 - Sustaining the natural resources of our state
- DEWNR Corporate Plan Goal 3 – Connecting people to nature, parks and places

In both Master Plan and Investigation Plan include a clear statement that explains that the proposed works are dependent on further investigations and approvals (which may include landowner permission (DEWNR crown lands), coastal hazard investigations, development approvals, marine park approvals, native vegetation and biodiversity assessments, etc).

Within the area of the Master Plan for the Northern Coastline of Whyalla there are two places of State heritage significance being the Point Lowly Lighthouse Complex and Fitzgerald Bay Stranded Shingle Ridge (designated place of geological significance), Stony Point, noting that this State Heritage Place was provisionally entered in the SA Heritage Register on 7 September 2016 and is expected to be confirmed in the Register by September 2017.

As these two places are State heritage-listed, any proposed development will require referral to the Minister responsible for the Heritage Places Act 1993 for advice as to the impact of that development on the heritage values of that State Heritage Place. Development of a State Heritage Place is defined in the Development Act 1993 as the demolition, removal, conversion, alteration or painting of, or addition to, the place, or any other work that could materially affect the heritage value of the place.
With further relation to potential future work on these places, the following comments were made:

- DEWNR would be supportive of any adaptive re-use (in accord with the principles of The Burra Charter) of the Lighthouse keepers Cottages at Point Lowly.
- DEWNR would support the installation of improved signage to celebrate and interpret the area, its history and heritage.
- DEWNR is supportive of interpretative signage at Fitzgerald Bay, highlighting the geological significance of this site. Any future signage for the site should identify it as a ‘Stranded Shingle Ridge’, not a ‘Shingle Beach’.

Important comments were also provided in relation to Crown Lands:

- Further investigation is required surrounding native title for Crown Lands
- Any land not under dedication to Council will require rededication and support of the Minister if required for use with regard to the Master Plan.
- For the Black Point area it has been confirmed that Barngarla native title only exists on the thirty metre coastal fringe (i.e will not impact the ‘Black Point’ crown land required for the project from a land tenure point of view)
- The purpose of the crown land dedicated to Council is for coastal conservation. Crown Lands may need to look at amending this subject to MSEC consent.
- DEWNR’s Crown Lands Unit will further review and provide comment on all crown land parcels in the plan

1 Note: numbers may not all add up to 21 or 100%, as some respondents may have selected “not sure” or skipped a question or more

| LH  | Pt Lowly Lighthouse | • Pt Lowly Road provides vehicle access to the Lighthouse and Cottages  
• Starting node of the Freycinet Trail  
• Pedestrian access to multiple sandy beaches | • Restricted public access  
• Located adjacent the Pt Lowly Cottages  
• Externally the Lighthouse appears in good condition  
• The Lighthouse is described structurally as 'Generally sound' (Pt Lowly Lighthouse Conditions Audit, Wagner 2005)  
• Low native coastal, saltbush and bluebush species  
• Minimal tree cover | • Positioned at the southern tip of Pt Lowly  
• Panoramic views  
• Access to sandy beaches  
• Site is heavily exposed to elements due to a lack of vegetation cover | • Panoramic views of Spencer Gulf, Whyalla township and steelworks  
• Distant views to Flinders ranges  
• Inland view to Santos and Port Bonython | • Interpretive signage including historical information relating to Freycinet, Lighthouse and Cottages and European colonisation | • Steel signage shows signs of corrosion due to site exposure |
| CT  | Pt Lowly Cottages | • Pt Lowly Road provides vehicle access to the Lighthouse and Cottages  
• Starting node of the Freycinet Trail  
• Pedestrian access to multiple sandy beaches  
• Walking distance to boat ramp | • Internal toilet, kitchen and sleeping facilities  
• Outdoor recreation space with BBQ facilities  
• Extension to the rear of the Cottages is evident | • Cottages are visibly worn both externally and internally  
• Generally, internal condition of furniture and fit out is poor | • Low native coastal, saltbush and bluebush species  
• Minimal tree cover externally to the site  
• Moderate tree cover internal to the site | • Positioned at the southern tip of Pt Lowly  
• Panoramic views  
• Access to sandy beaches | • Panoramic view to Spencer Gulf, Whyalla steelworks and township  
• Inland view to Santos processing plant and Port Bonython | • Interpretive signage including historical information relating to Freycinet, Lighthouse and Cottages and European colonisation |
| BR  | Boat ramp | • Vehicle access is provided from Pt Lowly Road  
• Access to sheltered sandy beach  
• Walking distance to Freycinet Trail | • 2 ramps are available for use  
• Recreation use only  
• Shared use (recreation and commercial fishing)  
• Located adjacent to Pt Lowly camping site and toilet facilities (200m) | • Ramp and surrounding infrastructure appears to be in good condition | • Minimal vegetation cover | • Predominant boat launching site for local fishers  
• Proximity to camp sites, toilet facilities and boat and trailer parking  
• Services demand during events and peak season | • View to Spencer Gulf  
• Distant views to Flinders Ranges | • Directional signage from Pt Lowly Road  
• Extensive marine signage at site, generally in good condition |
| TI  | Pt Lowly beach toilet facility | • Vehicle access is provided from Pt Lowly Road  
• Access to sandy beach | • Male, female and disabled toilets  
• Outdoor shower/wash down facility  
• Steel shelter and picnic table  
• Adjacent Pt Lowly sullage disposal facility | • Toilet facility appears in moderate condition  
• Graffiti vandalism is evident on external walls | • Low native coastal, saltbush and bluebush species  
• Minimal tree cover | • Adjacent asphalt carpark  
• Access to sandy beach  
• Aspect to coast  
• Central location within Pt Lowly | • View to Spencer Gulf  
• Inland view to Santos processing plant | • Directional signage from Pt Lowly Road  
• Pt Lowly camp ground information signage |

</tbody>
</table>
Informal gravel carparking is available at Pt Lowly, the Pt Lowly Lighthouse and Cottages, and extensively throughout the Fitzgerald Bay coastline.

**C1 Pt Lowly boat ramp carpark**
- Vehicle access is provided from Pt Lowly Road.
- Direct access to boat ramp and sheltered beach.
- Close proximity to Pt Lowly toilet facilities.
- Loose gravel ground surface.
- Posts and wire fence to boundary.
- No marked designation of sites.
- Site is predominantly used as car and boat trailer parking.
- Minimal adjacent vegetation is of poor quality.
- Minimal tree cover.
- Large expanse of gravel carpark.
- Site is exposed due to proximity to the coast and lack of vegetation.
- Caters for large numbers of car and boat trailer parking during events and peak periods.
- Predominantly used during events and peak periods.
- Directional signage from Pt Lowly Road.
- Parking signage at entry.

**C2 Pt Lowly beach carpark**
- Vehicle access from Pt Lowly Road.
- Access to sandy beach.
- Adjacent toilet facility with disabled toilet and cold outdoor shower.
- Asphalt ground surface.
- No line markings.
- Bollards to perimeter.
- Low saltbush and coastal species.
- Close proximity to sandy beach and toilet facility.
- Exposed site.
- Aspect to Spencer Gulf, Whyalla township and steelworks.
- Vehicle parking used to access sheltered sandy beach and toilet facility.
- Directional signage from Pt Lowly Road.
- Pt Lowly camp ground information signage.

**C3 Cuttlefish dive sites**
- Vehicle access from Pt Lowly Road.
- Access to cuttlefish breeding dive sites.
- Adjacent bench seating and signage.
- Loose gravel ground surface.
- No line markings.
- No wheel stops.
- Low native coastal, saltbush and bluebush species.
- Predominantly native vegetation.
- Minimal tree cover.
- Breeding dive sites.
- Isolated coastal location.
- Aspect to Spencer Gulf, Whyalla township and steelworks.
- Vehicle parking used to access Cuttlefish dive sites.
- Directional signage from Pt Lowly Road.
- Parking signage at entry.

**Pt Lowly**
- Signage at Pt Lowly is in moderate condition due to exposure to elements, remote location and accessibility for maintenance.
- Several signs show evidence of damage and are in need of replacement.
- Signage is inconsistent in style.
- Signage consists of:
  - Wayfinding - directional, parking and camping information.
  - Interpretive - historic, environmental and cultural stories, and information (storytelling, illustrations and factual data).

**Freyacen Trail**
- Signage provides information relating to:
  - The history of Louis Claude De Freycinet, Pt Lowly and European settlement of the area.
  - The Freycinet Trail.
  - Camp sites and car parks.
- Information signage is located at 15 locations from Pt Lowly Lighthouse and Cottages to Fitzgerald Bay bush camp site.
- Signage is consistent in style and is in moderate condition.

**Fitzgerald Bay**
- Signage condition is generally low/moderate and is inconsistent in style.
- Minimal signage is evident in the Fitzgerald Bay locality and generally refers only to parking and camping locations.
- Freycinet Trail and ‘Rare Rocky Ridges’ signage provide historic and geological information.
Appendix 3: Master Plan
Appendix 4: Implementation Plan
APPENDIX C – IMPLEMENTATION PLAN

The implementation of the master plan should have regard to the below requirements:

- Future proposed works are based on preliminary indicative designs that are all subject to future detailed design;
- Future proposed works may be subject to future investigations and approvals as required, which will depend on the nature and location of works;
- Approvals may include land owner permission, coastal hazard investigations, development approvals, marine park approvals, native vegetation and biodiversity assessments, etc;
- Further investigation is required surrounding native title for Crown Lands;
- Any land not under dedication to Council will require rededication and support of the Minister if required for use with regard to the Master Plan;
- DEWNR’s Crown Lands Unit will further review and provide comment on all crown land parcels in the plan; and
- The proposed works are dependent on further investigations and approvals (which may include landowner permission, native title negotiation, coastal hazard investigations, development approvals, marine park approvals, native vegetation and biodiversity assessments, etc).

# Douglas Point

## 4.1 Built Infrastructure

4.1.1 Provide shelter in consultation with residents, at existing lookout at Douglas Point South  
Council Medium $20,000-$40,000

## 4.2 Accommodation

4.2.1 Formalise existing camping areas at Douglas Point North and provide basic facilities (toilets/shelters)  
Council Low $50,000-100,000

## 5. Whole of Area

### 5.1 Aquaculture

5.1.1 Enable resumption of aquaculture activities  
Ensure appropriate zoning  
Council/DEWNR/PIRSA High -

5.1.2 Secure site for land based facilities & resume activity  
Private (with DEWNR) High -

5.1.3 Encourage and develop associated activities to become part of the ‘seafood frontier’ trail  
Experiences can include:  
Hikes  
Off shore fishing excursions  
Tastings  
Bird/dolphin watching, kayaking etc  
Council/RDA Tourism SA/Private Medium -

### 5.2 Four wheel driving

5.2.1 Prepare a four wheel driving strategy and investigate four wheel driving opportunities along the coast, with due consideration given to liability and environmental impacts  
Council High $10,000-$15,000

5.2.2 Investigate traffic management at Fitzgerald Bay and other key environmentally-fragile areas to prevent conflicts with residents and visitors, and environmental assets (shingle ridges, beach/erosion)  
Council High $10,000-$15,000

### 5.3 Mountain biking

5.3.1 Prepare a mountain biking strategy and create mountain biking opportunities  
Council Medium $15,000-$25,000
### 5.4 Year Round Activation
